## 1.0 INTRODUCTION

### 1.1 Background

The Kinloss Landfill Site (site) is located on the north half of Part Lot 16, Concession 6 in the former Township of Kinloss in the amalgamated Township of Huron-Kinloss (Township). Refer to **Map 1** for the regional location of the site.

The landfill site is 6.0 hectares in area, all of which is approved for landfilling by the Certificate of Approval. The primary landfilling area is 3.9 hectares in area and is located within the approved area. The Township also owns a 3.0-hectare parcel of land immediately south of the landfill site and holds a 99-year lease on a 12.3-hectare property abutting the eastern property boundary of the landfill site. The respective locations of the aforementioned properties are presented in **Map 2, Existing Conditions**.

The landfill site operates in accordance with Certificate of Approval No. A272801 issued on October 1, 1980, amended in February 1993 and February 1996, and is now referred to as Environmental Compliance Approval Number A272801 (ECA). The Kinloss Site remains temporarily closed, until closure of the Huron Landfill. The ECA and amendments are enclosed in **APPENDIX A**.

### 1.2 Purpose

The purpose of this report is to provide an annual report regarding the operation and monitoring of the landfill. The Annual Monitoring Report is a required condition of the ECA (**APPENDIX A**).

## 2.0 SITE OPERATIONS

### 2.1 Site Usage

The Kinloss Landfill Site continues to accept recyclable materials from the former Village of Lucknow and Township of Kinloss. The acceptance of household waste was discontinued on August 1, 2002. Household waste from the Township of Kinloss is landfilled at the Huron Landfill. The Huron Landfill (Certificate of Approval No. A272601) is owned and operated by the Township of Huron-Kinloss. The ability to accept waste from the former Township of Kinloss and former Village of Lucknow at the Huron Landfill was approved by the Ministry of the Environment, Conservation and Parks (MECP) in 2010.

### 2.2 Site Access

The Kinloss Landfill Site is open to residents during the months of April to October for the acceptance of recyclables, scrap metal, tires, burnable materials and brush. The operating hours during these months are on Saturdays from 10:00 a.m. to 2:00 p.m. The site is closed from November to the first Saturday in April.

The access road is gravel and well maintained by the Township. Access to the site is controlled by a lockable steel cable between a rigid steel frame. Fencing is in place around the entire perimeter of the site.

Signage at the front gate identifies who may use the site, hours of operation, ECA number, acceptable waste types and emergency contact information. The existing topography and vegetation provide screening.

Township staff indicated no complaints regarding the operation of the Kinloss Landfill were received in 2023.

## 2.3 Site Life

The acceptance of household waste at the Kinloss Landfill was discontinued in August 2002, with the waste being diverted to the Huron Landfill. The Kinloss Landfill Site continues to act as a transfer station, receiving recyclable and burnable materials from residents of the former Township of Kinloss and the Village of Lucknow.

A letter was issued with the 2002 Annual Monitoring Report (submitted in March 2003) indicating that the Township had decided to divert the waste from the Kinloss Landfill to the Huron Landfill, but no formal application for the temporary closure of the site was made to the MECP at that time.

The MECP conducted an inspection at the Kinloss Landfill on November 18, 2021. Details of the inspection are included in **APPENDIX F**. The inspection noted that the current closed status of the site should be included in the ECA and that an amendment to the existing ECA is required. The MECP has also noted that the current ECA does not include reference to the Contaminant Attenuation Zone (CAZ) and that those details should also be included in the amendment application. The November 2021 inspection asked for a written response providing documentation confirming the landfill is registered on file. The Township responded on February 15, 2022 and provided the title search results (**APPENDIX F**).

The MECP did not conduct an inspection at the Kinloss Landfill in 2023.

The MECP provided comments on the 2022 Annual Monitoring Report for the site regarding the surface water monitoring analysis via email (**APPENDIX F**) on June 12, 2023. The MECP was in agreement that surface water quality from Stations SW1 and SW2 do not suggest significant impact from landfill activities. The surface water monitoring program and reporting continue as per the existing ECA requirements.

WSP and the Township of Huron-Kinloss are currently working on an amendment application to ECA No. A272801 to reflect the temporarily closed status of the Kinloss site and to address the CAZ which was in question from the November 18, 2021 MECP inspection (**APPENDIX F**).

The Township intends to re-open the Kinloss Landfill site once the Huron Landfill site has reached capacity (estimated site life remaining is approximately 7 years). Based on information from the 2006 Annual Monitoring Report (R.J. Burnside & Associates Ltd.) the estimated remaining capacity of the Kinloss site is 137,000 m<sup>3</sup>. This estimate is based on a site survey completed in August 2003 that was based on a cross-sectional survey of the waste surface only, followed by end-method volumetric calculations. It should be noted that calculations and projections are subject to change as conditions change. It is recommended that annual topographic surveys be completed once landfilling resumes at the Kinloss Landfill site, following this period of temporary closure. The annual topographic surveys allow for the assessment of remaining landfill capacity. Data collected from these surveys, coupled with computer modelling, will allow for more accurate determination of annual landfilled volumes and remaining site life.

## 2.4 Burning Operations

Burning operations are conducted at the site. In accordance with MECP Guideline C-7 Burning at Landfill Sites, only segregated brush, lumber and clean wood may be burned at the site. Burning operations take place in a separate area, as shown in **Map 2**. Burning operations are conducted when the site is closed to the public and weather conditions are favourable. Township Staff ensure that only designated materials are in the burn pile before burning and supervise all burning operations.

## 2.5 Recycling/Waste Reduction

As of August 1, 2002, the Kinloss Landfill ceased acceptance of household waste. Recyclables, scrap metal, white goods, brush, tires and burnable materials from the former Township of Kinloss and the Village of Lucknow are still accepted. Household waste from the former Township of Kinloss is transported to the Huron Landfill via curbside pickup. Household waste from the Village of Lucknow is landfilled at the Huron Landfill as of July 2018.

Bruce Area Solid Waste Recycling (BASWR) has provided curbside waste and blue box collection for the municipality since August 2002. Residents of the former Township of Kinloss and the Village of Lucknow can also bring their recyclables and burnable materials to the landfill during open hours.

Combined 2023 waste diversion totals for all Township landfills are presented in **APPENDIX B**.

### 2.5.1 Scrap Metal and Tires

In 2023, 128.20 tonnes of scrap metal were removed from the Huron and Kinloss landfills by AOR Metals.

In 2023, the number of tires collected at the Huron and Kinloss landfills as part of the Ontario Tire Stewardship Program totalled 3,308 tires, at an approximate mass of 29.1169.71 tonnes.

It is recommended that scrap metal and tires be removed by a recycling contractor when the quantity of the segregated material justifies removal.

### 2.5.2 Recyclable Materials

The service area of the Kinloss Landfill is provided with regular Blue Box pickup on a bi-weekly basis, as is the whole of the Township of Huron-Kinloss. Blue Box pickup is provided by Bruce Area Solid Waste Recycling (BASWR).

Recycling bins are also located on-site as shown in **Map 2**. Cardboard recycling as well as regular Blue Box material recycling bins are available. BASWR removes the materials from these bins on a regular basis.

The 2023 recycling data summaries for the Township from BASWR are enclosed in **APPENDIX B**.

### 2.5.3 E-Waste and Mattresses

Electronic waste (E-waste) is diverted from landfilling within the Township as well. In 2023, a total of 20.93 tonnes of E-waste was diverted. E-waste is not accepted at the Kinloss Landfill Site.

Mattresses are segregated at the site and stockpiled in a sea container. The total number of mattresses shipped off site in 2023 was 537 (18.26 tonnes) for the Huron Landfill. The Kinloss Landfill Site does not accept mattresses.

### 2.5.4 Summary of Recycling/Waste Reduction

**Table 5** summarizes the recycling and diverted materials data for the Township (both the Kinloss and Huron Landfills are represented) over the past five years. As shown in **Table 5**, the recyclable tonnages have been relatively consistent over time. The 2023 tonnage of recyclables (404.21 tonnes) returned to within typical historical range following the historically low tonnage in 2022 (223.66 tonnes). When all segregated materials are included, the total tonnage diverted from both Township landfills (Kinloss and Huron) is 604.46 tonnes in 2023. This tonnage represents an 18% diversion rate for the Township. The estimated saving in landfill space for 2023 is approximately 1,208.92 m<sup>3</sup>.

## 3.0 MONITORING

### 3.1 Current Monitoring Program

The current monitoring program at the Kinloss Landfill site is completed in accordance with the ECA for the site, Number A272801, issued October 1, 1980, and most recently amended on February 27, 1996. The monitoring of the groundwater and surface water at the Kinloss Landfill enables the determination of the flow direction and parameter concentrations of the landfill generated leachate plume. Samples are obtained twice per year (spring and fall) from the monitoring wells and surface water stations. In addition, water level elevations are obtained twice per year to confirm the groundwater flow direction. The monitoring program has been in existence since 1988. Currently, groundwater elevations are reported relative to a historical survey with an inferred benchmark.

The monitoring program dictates that each observation well sampled be purged prior to sampling to obtain a representative groundwater sample. To purge a well, a volume of water equivalent to three well casing volumes is removed from the well, or the well is purged dry and allowed to recover prior to sample collection.

The sampling and field filtering materials utilized to collect the groundwater samples are the Waterra polytube and foot valve and a disposable high turbidity 0.45 micron in-line filter. Each well is equipped with dedicated polytubing and a foot valve.

The monitoring well network is summarized in **Table 1** below. Monitoring wells OW4 to OW11 were installed by backhoe in 1985 and are relatively rudimentary in construction. The remaining wells were drilled in 1997 to 2004 and are constructed of 2" diameter PVC casing and 1.5 m long PVC well screens. In addition, these wells contain a sand filter pack around the screened area and are sealed with bentonite above the well screen. In October 2014, OW14 was replaced with OW14-14. In August 2016, OW11-85 was decommissioned and replaced with OW11-16. Additionally, OW15 and OW16 were drilled in August 2016. Borehole logs containing the construction details of the monitoring wells are enclosed in **APPENDIX C**. The wells are protected by a lockable steel casing.

Well inspections are conducted in conjunction with semi-annual sampling in spring and fall, as shown in **Table 1**.

OW15	Steel Casing and Lid	Locked	Locked	Good	Good
OW16	Steel Casing and Lid	Locked	Locked	Good	Good

Notes: OW = Observation Well, S = Shallow, I = Intermediate and D = Deep  
Wells OW4, OW5, OW6, OW7, OW9 & OW11 were installed by backhoe in 1985. Wells OW12 and OW13S were drilled in 1997. OW14 was drilled in 2003 and OW13I & OW13D were drilled in 2004. OW14-03 was decommissioned and replaced with OW14-14 on October 28, 2014.  
OW9 is an inactive well on the site and is not part of the sampling program.  
OW11-85 was decommissioned and replaced with OW11-16 on August 16, 2016.  
OW15 and OW16 were drilled on August 15, 2016.

In addition to the monitoring wells, there are two surface water stations that are sampled semi-annually. These two stations are located on the creek immediately east of the site. SW1 is the upstream sampling location and SW2 is the downstream sampling location. The locations of both surface water stations are shown in **Map 2, Existing Conditions**.

In 2006, three gas probes were installed at the site. The locations of these three gas probes, designated GP1, GP2, and GP3, are illustrated in **Map 2**. Prior to the installation of these gas probes, methane readings were obtained from the headspace of the monitoring wells. Methane monitoring was conducted at gas probes GP1, GP2 and GP3 in February, May and September 2023. Frozen ground conditions were encountered during the February monitoring event.

In 2023, water level elevations were measured, and wells were purged and sampled, on May 16 and September 21. The samples collected during the monitoring program were transferred to coolers with ice and submitted under chain-of-custody via overnight courier to Caduceon Environmental Laboratories for analysis. The certificates of analysis and laboratory results are enclosed in **APPENDIX D**.

### 3.2 Shallow Groundwater Configuration

To determine the groundwater gradient and flow direction in 2023, water level measurements were obtained on May 16, 2023.

A summary of the water table elevation data from 1989 to 2023 is presented in appended **Table 6**. **Figure 1** is a hydrograph for monitoring wells OW13S, OW13I and OW13D. The water levels for the remaining wells are summarized in **Figure 2**. As shown in **Table 6** and **Figures 1** and **2**, there are seasonal fluctuations shown by many of the wells. In general, groundwater elevations were higher in the spring and lower in the fall. Upgradient wells OW7-85 and OW12-97, as well as OW14-14, which is screened below the waste, exhibit greater seasonal fluctuations than the other wells.

The groundwater flow system is a transporting medium for conveying potential contaminants away from the landfill area. As a result, the impact assessment of the site is dependent, to a large extent, on the groundwater flow rate, and flow pattern.

Flow in a hydrostatic unit occurs, under the influence of gravity, from points of high hydraulic potential to points of lower hydraulic potential. The actual flow path will follow a three-dimensional route along the strata of least resistance. Resistance to flow is measured in terms of the hydraulic conductivity of the deposit and the hydraulic gradient across the flow path. A cross-section of the site and borehole logs for each of the monitoring wells are enclosed in **APPENDIX C** for reference. The cross-section is also provided on **Map 4**.

As shown on the Groundwater Flow map, **Map 3**, and the Cross-Section, **Map 4**, the shallow groundwater flows in a general west to east direction below the waste. The groundwater contours are estimated based on groundwater level measurements obtained on May 15, 2023. It should be noted that the contours are considered reliable only in the vicinity of the wells; however, a reasonable interpretation of the contours can be made on the basis that the water table is generally a subdued reflection of surface topography. The flow pattern is consistent with past results. On May 15, 2023, the horizontal hydraulic gradient east of the landfill mound was observed to range from 0.021 m/m in the northeast corner to 0.008 m/m in the southeast, as shown in **Map 3**. Based on the cross-section in **Map 4**, the sand zone below the waste appears to be largely unsaturated. The capping of the landfill may be limiting infiltration. It is noted that the landfill is located on a topographic high which is limited in size.

Monitoring wells OW13S, OW13I and OW13D were constructed in close proximity to each other, which allows for the determination of vertical hydraulic gradients in this area of the site. OW13S is screened at the top of sand and gravel unit, OW13I is screened at the bottom of the sand and gravel unit, and OW13D is screened in the underlying silt till. The well logs for all three (3) wells are enclosed in **APPENDIX C**. As shown in **Table 6**, the groundwater elevations of OW13S and OW13I, and of OW13I and OW13D have only a negligible difference in

2023. During the May 15, 2023, water level monitoring, the vertical gradient was -0.031m/m (upward) between OW13S and OW13I. The vertical gradient between OW13I and OW13D on May 15, 2023 was -0.011 m/m (upward). The vertical gradient between OW13S and OW13I had been downward since monitoring began at OW13I in September 2004, and continued to remain downward until July 2008; however, since December 2008, the vertical gradient has generally been consistently upward.

### 3.3 Groundwater Monitoring Results

**Figure 3** is a summary of the spring 2023 concentrations of several indicator parameters that are commonly representative of the leachate characteristics at this site (chloride, hardness, dissolved organic carbon (DOC) and conductivity). **Figures 4a to 4g** are graphical representations for monitoring wells OW11-16 (upgradient); OW14; OW4; OW13-I; OW15 and OW16, that correspond to the primary flow path through the site. The graphs represent the concentration trend plots for the following indicator parameters: chloride, boron, barium, sulphate, ammonia, nitrate and DOC.

The entire set of leachate indicator parameters selected for this site includes alkalinity, boron, chloride, DOC, hardness, iron, nitrate, nitrite, manganese, sodium, and sulphate.

These parameters have been selected as the leachate indicator parameters for this site based on the leachate characteristics and recommendations from the MECP. The leachate indicator parameters are used to identify potential leachate impacts at downgradient monitoring locations.

Historical and current (2023) groundwater chemistry results are summarized in **APPENDIX E**.

#### 3.3.1 Background Groundwater Chemistry

To evaluate the influence of landfill leachate on the local groundwater system, it is necessary to determine background conditions. These background conditions reflect the naturally occurring levels of various parameters and provide a reference point to determine the magnitude of any leachate impacts. The background conditions reflect conditions unaffected by the landfill operation. Based on the groundwater flow configuration (**Map 3**), monitoring wells OW6, OW7 and OW12 are located upgradient or cross-gradient of the landfilled area.

In past reports, monitoring wells OW7 and OW12 have been considered as background monitors. The MECP recommended that a new background monitoring well be considered in a review of the 2006 Annual Monitoring Report (correspondence enclosed in **APPENDIX F**). The new background well was recommended due to difficulties with monitoring wells OW7 and OW12. Monitor OW7 is not an ideal background well as it is often dry during sampling events, while monitor OW12 has exhibited elevated indicator parameter concentrations with respect to the other monitoring wells. Historically, the MECP had recommended the consideration of using OW6 as a background well due to the historical groundwater quality and its cross-gradient location. The groundwater quality at OW6 relative to the other wells is illustrated in **Figure 3**. The groundwater elevations illustrated in **Map 3** confirm OW6 is in a cross-gradient location.

In August 2016, OW11-85 was decommissioned and replaced by OW11-16. The MECP reviewed the 2017 annual monitoring report (**APPENDIX F**) and approved the use of OW11-16 as the background monitoring well. OW11-16 will henceforth be referred to as the “background” monitoring well for the Reasonable Use Guideline Criteria (RUC).

As indicated above, the leachate indicator parameters selected for this site include alkalinity, boron, chloride, DOC, hardness, iron, nitrate, nitrite, manganese, sodium, and sulphate.

The results in 2023 for the leachate indicator parameters at the leachate Monitor OW4 and background Monitor OW11-16 (hereafter referred to simply as 'OW11') are summarized in the following table. As shown in the table, the concentration of each leachate indicator parameter was higher in OW4 in 2023 compared to OW11, with the exceptions of nitrate (higher at OW11) and nitrite (below detection limit at both wells).

<b>Table 2 – Leachate Indicator Parameters, Background and Leachate Well</b>				
<b>Indicator Parameters (mg/L)</b>	<b>OW11 (background)</b>		<b>OW4 (leachate)</b>	
	<b>Spring 2023</b>	<b>Fall 2023</b>	<b>Spring 2023</b>	<b>Fall 2023</b>
Alkalinity	357	338	690	732
Boron	0.005	0.024	0.382	0.468
Chloride	2.3	2.5	7.9	12.7
Dissolved Organic Carbon	1.0	4	9.9	15.2
Hardness	355	325	575	597
Iron	<0.005	0.006	16.7	16.2
Nitrate	2.05	1.66	<0.05	0.25
Nitrite	<0.05	<0.05	<0.05	<0.05
Manganese	<0.001	<0.001	0.606	0.616
Sodium	1.8	2.8	16.7	30.2
Sulphate	5	4	25	14

### 3.3.2 Leachate Monitoring

The analytical results from monitoring well OW4 are used to determine leachate strength and characteristics unique to the Kinloss Landfill. This well is one of the closest downgradient wells to the waste and historical monitoring data have indicated elevated concentrations of leachate indicator parameters compared to background levels.

### 3.3.3 Downgradient Groundwater Monitoring

As shown in **Map 3**, the following wells are located downgradient of the filled waste:

- OW4
- OW5
- OW13S
- OW13I
- OW13D
- OW14
- OW15
- OW16

**Figure 3a and Figure 3b** illustrate the indicator results for these wells for the spring and fall monitoring events. **Figures 4a to 4g** are plots of the following indicator results: chloride, boron, barium, sulphate, ammonia, nitrate and DOC. The plots are illustrated over time for the downgradient monitoring wells, excluding OW5, as per the MECP review of the 2017 Annual Monitoring Report (**APPENDIX F**).

Monitors OW4 and OW5 are located approximately 20 m and 50 m, respectively, downgradient of the fill area, as shown in **Map 3**. As shown in **Figures 3a and 3b**, the leachate indicator parameters for OW4 are generally similar to the concentrations at OW14, which is screened below the waste. The exception is chloride, where the concentration at OW14 is considerably higher compared to OW4. The OW4 concentrations are also similar to a number of other downgradient wells, but elevated compared to OW5. Leachate impacts are not unexpected at OW4 as the well is located immediately downgradient of the landfill mound (**Map 3**). As shown in **Figure 4a**, the concentration of chloride has been decreasing over time at OW4 since 2004, with occasional fluctuations, indicating leachate strength may be decreasing with time. The concentrations of conductivity and sodium have also decreased over time at OW4, and the DOC concentrations have decreased overall since 2002, with fluctuations over time. The results for OW5 are generally similar to background wells OW6 and OW11, indicating that leachate impacts have not migrated to the north or northeast.

In 2014, OW14-03 was replaced with OW14-14 and extended below the waste fill until it intersected the lower fall water table. OW14 is screened in silty fine sand. **Figures 3a and 3b** illustrates the May and September 2023 results for OW14-14 plotted against other wells. As shown in **Figures 3a and 3b**, the results for OW14-14 are higher than background (OW6 and OW11) but similar to downgradient well OW4 for the main leachate parameters, excluding chloride. As indicated above, the chloride concentrations at OW14 are considerably elevated compared to OW4. The 2007 to 2023 results for OW14 (**APPENDIX E**) indicate parameter concentrations are elevated relative to background concentrations. Based on the overall results, landfill impacts are present at monitor OW14.

As shown in the Cross-Section (**Map 4**), OW13S is screened at the top of the sand and gravel unit, OW13I is screened at the bottom of the sand and gravel unit, and OW13D is screened in the underlying silt till. Historically, leachate impacts in the silt till unit (at OW13D) are negligible. Continued monitoring will confirm the long-term trend at this location. The monitoring results for OW13D indicate near-background concentrations for leachate parameters and, as such, leachate does not appear to be impacting the silt till layer underlying the super-positioned landfill and sand overburden aquifer.

OW13S and OW13I continue to show elevated levels of several leachate indicator parameters compared to background groundwater quality.

Based on the interpreted slightly upward hydraulic gradient and the reported leachate parameter concentrations at OW13D, any leachate impacts in that area of the site are likely primarily moving in a near horizontal direction with no discernible impacts in the underlying silt till. It is also noted that the interpreted horizontal hydraulic gradient in the southeast area of the site is also relatively low (0.011 m/m as stated in **Section 3.2**). The groundwater migration in general will be relatively low in velocity.

Wells OW15 and OW16 are located in the buffer lands east of the OW13 nest. Elevated concentrations of leachate indicator parameters chloride, hardness, and conductivity (Spring 2023) and hardness and DOC (Fall 2023) compared to background and downgradient groundwater quality are observed at OW15. The DOC concentration at well OW15 was historically high in the fall of 2023. The leachate indicator parameter

concentrations at OW16 in 2023, however, are similar to background, with the exceptions of hardness (spring and fall), which are elevated compared to background but notably lower compared to OW15.

The MECP provided correspondence regarding the groundwater monitoring program on August 20, 2015. As part of this correspondence, an August 14, 2015, memorandum from MECP hydrogeologist, Mr. Simon Thuss, was forwarded to the Township. WSP responded to this memorandum on October 8, 2015. The comments brought forward in MECP correspondence have been largely addressed in WSP's response, with the exception being the reassessment of reasonable use criteria, which is discussed in **Section 3.5** of this report. In 2016, the Township completed the installation and deepening of wells discussed in correspondence in August 2016.

Topographic survey data are not available at the Kinloss Waste Disposal Site. WSP recommends that a topographic survey be completed to support the amendment to the ECA, including information related to the CAZ, and that the elevations of the groundwater monitoring network are included as part of this work. Previously, topographic surveys had not been completed due to the temporary closure of the site in 2002.

### 3.4 Surface Water Monitoring

Surface water samples were obtained on May 15 and September 21, 2023, at the two surface water stations. Both surface water stations are located on the creek adjacent to the eastern boundary of the site. This creek flows in a northerly direction and is a tributary of Kinloss Creek. Station SW1 is upstream of the landfill and is located at the south end of the culvert under Concession Road 5/6, as shown in **Map 2**. Station SW2 is downstream of the landfill and is located approximately 150 m north of the northeast corner of the site.

The results of the 2007 to 2023 surface water sampling are summarized in the Surface Water Results (**APPENDIX G**). The laboratory detection limits and Provincial Water Quality Objectives (PWQO) are also included in the summaries. Exceedances of PWQO are indicated by shaded cells. **Figure 5** compares leachate indicators for the May 15, 2023, sampling event.

The upstream station, SW1, showed an exceedance of the PWQO for total iron (507 ug/L) and total zinc (48 ug/L) in the fall 2023 sampling event. There were no PWQO exceedances related to SW2 in either the spring or fall 2023 sampling events. Historically, there have been some exceedances of the PWQO at both the upgradient and downgradient monitoring stations related to metals parameters, but there is no trend toward increasing concentrations of leachate indicator parameters. These results indicate that the landfill does not have a measurable adverse influence on water quality within the creek.

### 3.5 Reasonable Use

In accordance with the appropriate Reasonable Use Guideline criteria (RUC) for particular reasonable uses, a change in quality of the groundwater on an adjacent property will be accepted only as follows:

*The quality cannot be degraded by an amount in excess of 50% of the difference between background and the Ontario Drinking Water Standards for non-health related parameters and in excess of 25% of the difference between background and the Ontario Drinking Water Standards for health-related parameters. Background is considered to be the quality of the groundwater prior to any man-made contamination.*

In assessing the amount of degradation that is acceptable, consideration is given to the natural, uncontaminated quality of the water, the present quality of the groundwater and potential contamination of the groundwater from all sources.

The maximum concentration of a particular contaminant that would be acceptable in the groundwater beneath an adjacent property is calculated in accordance with the following relationship.

$$C_m = C_b + x(C_r - C_b)$$

Where  $C_m$  = maximum concentration accepted

$C_b$  = background concentration

$C_r$  = maximum concentration permitted in accordance with the Ontario Drinking Water Standards.

$x$  = a constant that reduces the contamination to a level that is considered by the MECP to have a negligible effect on the water use (i.e., 0.5 for non-health related parameters; 0.25 for health related parameters).

The MECP Landfill Guidelines state the following regarding establishing Background Concentration: *The background concentration of a contaminant in the ground water of receptor aquifer is the median value for that contaminant based on all ground water samples taken from the receptor aquifer in accordance with the following rules:*

- 1) *At least five samples must be taken.*
- 2) *The samples must be taken at or near the site boundary where potential impact is being examined.*
- 3) *The samples must not be taken from locations known to be or likely to be contaminated by human activity.*

Monitor OW11-16 meets the above requirements. In order to determine potential Reasonable Use parameters, the median values of the following parameters (all within Ontario Drinking Water Standards (ODWS)) were calculated using concentrations reported since 2007:

- Alkalinity
- Boron
- Chloride
- Dissolved Organic Carbon (DOC)
- Sodium

In their August 14, 2015, memorandum (**APPENDIX F**), the MECP recommended the inclusion of hardness, iron, manganese, sulphate, nitrate, and nitrite in the RUC annual evaluation.

The leachate indicator parameters now selected for this site include alkalinity, boron, chloride, DOC, hardness, iron, nitrate, nitrite, manganese, sodium, and sulphate.

The Township understands the intent of the RUC evaluation as a tool to determine if groundwater downgradient of the landfill is being impacted beyond reasonable criteria. At the Kinloss Waste Disposal Site, the RUC evaluation is being used to determine the extent of leachate migration off-site.

Correspondence from the MECP was received August 18, 2016, regarding the MECP review of the “Annual Monitoring Report – 2015, Kinloss Landfill Site”. A copy of this letter is provided in **APPENDIX F**. The MECP continues to recommend that additional parameters (including at least hardness, manganese, and sulphate) be included in the RUC annual evaluation.

In August 2016, a new upgradient background monitor (OW11-16) was drilled. Additionally, two new monitors, OW15 and OW16, were drilled (east of the OW13 nest) in the buffer lands to further define the extent of the leachate plume at the Kinloss Landfill Site.

The results of the RUC evaluation for 2023 have been summarized in **Table 7** using OW11-16 to represent the background concentration conditions, which was decided upon in correspondence between WSP and the MECP dated December 13, 2018 (**APPENDIX F**). It is noted that the requirement for a landfill site to be in compliance with the RUC applies to groundwater quality at the property boundary (OW13 nest, OW15 and OW16). Monitor OW11-16 now satisfies the requirements for a suitable background concentration, as at least five samples have been collected from the well. The parameters hardness, manganese and sulphate have been included in the assessment.

**Table 7** has been updated using the OW11-16 monitoring data from 2016 to 2023.

The RUC exceedances are shaded in **Table 7**. As shown in **Table 7**, the groundwater concentrations at monitoring wells OW13S, OW13I and OW15 exceeded the RUC for alkalinity, DOC, hardness and manganese during both spring and fall monitoring events. OW15 also exceeded the RUC for iron in the spring and fall monitoring events and sulphate during the spring. The groundwater quality at OW13D exceeded the RUC for DOC and iron in September 2023. OW16 exceeded the RUC for DOC and manganese in May and September and iron during the September monitoring event. .

In 2023, concentrations of RUC parameters remained elevated at OW13S and OW13I. OW13S and OW13I continue to be influenced by leachate, as evidenced by the elevated leachate indicator parameter concentrations and RUC exceedances. Continued monitoring is recommended to confirm the long-term trend at this location. The shallow aquifer in the southeast corner of the property remains influenced by leachate. Monitor OW13D does not appear to be influenced by leachate, which is likely a result of the fine soil conditions and upward gradient below the Kinloss Waste Disposal Site. Only DOC and iron concentrations exceeded the RUC at OW13D in 2023, which is consistent with historic results and likely representative of natural groundwater conditions in the till.

RUC exceedances related to DOC, iron and manganese occurred at least once in 2023 at wells OW15 and OW16. Additionally, RUC exceedances related to sulphate (spring only), alkalinity, and hardness occurred at OW15. , A leachate influence is likely occurring at OW15 and OW16, although the leachate indicator parameter concentrations are considerably higher at OW15 compared to the slightly further downgradient OW16.

As shown in **Map 2**, there are substantial buffer lands downgradient of OW13S, which are leased by the Township. In its review of the 2006 Annual Monitoring Report, the MECP requested additional information regarding the buffer property. The following section provides additional information and discussion on leachate impacts within this area.

### 3.6 Buffer Lands

In its review of the 2006 Annual Monitoring Report, the MECP asked the following question regarding the buffer lands:

*Are the lands to the east leased by the Township a part of a formal Contaminant Attenuation Zone?*

The buffer lands are shown in **Map 2**. The lands are approximately 12.1 hectares (30 acres) in area and are located on Part Lot 17, Concession 6, former Township of Kinloss, County of Bruce.

These buffer lands provide approximately 130 m of downgradient property to allow for additional leachate attenuation before the groundwater migrates off Township controlled property.

**APPENDIX H** contains a copy of the legal agreement between the Township and the owners of the buffer lands. A copy of the Certificate of Registration, lease agreement and legal survey are enclosed in **APPENDIX H**. The lease agreement allows the lands to be used for contaminant attenuation. Access to the property for monitoring purposes is permitted through the agreement. The lease agreement was in effect as of January 1, 1999, and has a 99-year term.

Therefore, the buffer lands east of the landfill site meet the requirements of a formal CAZ.

Correspondence from the MECP on August 14, 2015, acknowledged WSP's identification of leachate impacts at the site boundary in wells OW13S and OW13I. This correspondence also noted that since leachate has been identified within the CAZ, the Township must work to delineate the plume within the CAZ and ensure that it remains confined within this area.

In August 2016, the Township installed additional wells (OW15 and OW16) within the CAZ. These wells are used to define the extent of the plume within the CAZ and assess the potential for leachate migration beyond the boundaries of the CAZ.

As noted previously, the Township is working on an ECA amendment application that will include the status of the Kinloss Landfill as temporarily closed, as well as the presence of the formal CAZ on the buffer lands east of the landfill site.

### 3.7 Combustible Gas

In 2006, three gas probes were installed on-site to allow for the monitoring of combustible gas in the unsaturated overburden. The locations of these three gas probes, designated GP1, GP2, and GP3, are illustrated in **Map 2**.

The combustible monitoring results for 2007 to 2023 have been included in **Table 3**.

**Notes:** 1. All readings shown in % gas by volume in air.

The principal combustible gas associated with municipal landfills is methane. Since methane is less dense than air, methane typically migrates upwards from the refuse into the unsaturated soil cover and dissipates by venting to the atmosphere. During periods of frost and/or snow cover, venting is reduced or inhibited, and the primary direction of methane migration is lateral.

Based on the monitoring results, there is no indication of combustible gas migration within the unsaturated overburden at the site.

## 4.0 PROPOSED FUTURE MONITORING PROGRAM

A summary of the proposed monitoring program is presented in **Table 4**. This proposed program is based on the program required under the current ECA for the site. The parameters outlined in **Table 4** include the leachate indicator parameters selected for this site: alkalinity, boron, chloride, DOC, hardness, iron, nitrate, nitrite,

manganese, sodium, and sulphate, as well as additional parameters to characterize the quality and extent of the leachate plume. If changes in leachate characteristics are observed in the future, this list of parameters can be modified.

**Table 4**  
**Kinloss Landfill Site**  
**Monitoring Program**

OW13D	✓	✓
OW14-14	✓	✓
OW15	✓	✓
OW16	✓	✓
SW1	✓	✓
SW2	✓	✓

**Notes:**

1. ✓ indicates to be sampled.
2. The laboratory parameter suites for groundwater and surface water samples will include:
 

<ul style="list-style-type: none"> <li>▪ Alkalinity</li> <li>▪ Ammonia</li> <li>▪ Anions – Cl, NO<sub>2</sub>, NO<sub>3</sub>, SO<sub>4</sub></li> <li>▪ Conductivity</li> <li>▪ Dissolved metals by ICPMS (include boron, iron, manganese, sodium)</li> <li>▪ Total phosphorus (SW only)</li> </ul>	<ul style="list-style-type: none"> <li>▪ DOC</li> <li>▪ Hardness</li> <li>▪ Phenols</li> <li>▪ pH</li> <li>▪ TKN</li> </ul>
--	---
3. At all monitoring wells and SW stations the following field measurements should be obtained:
  - Temperature
  - pH
  - Conductivity
4. In addition, methane measurements from GP1, GP2 and GP3 will be obtained in spring, fall and once under frozen conditions.

## 5.0 CONCLUSIONS

- 1) Currently, the Kinloss Landfill site is only accepting recyclable and burnable materials. The site does not receive domestic waste.
- 2) The Kinloss Landfill site is temporarily closed and has an estimated remaining capacity of 137,000 m<sup>3</sup>. The Township plans to re-open the site to accept municipal waste when the capacity of the Huron Landfill is expended (remaining site life estimated at approximately 7 years ).
- 3) Burning operations in 2023 were conducted in accordance with MECP Guideline C-7.
- 4) Security and control of the site in 2023 continued to be successful.
- 5) The Blue Box Recycling Program diverted 404 tonnes of recyclable materials and approximately 200 tonnes of scrap metal, tires, E-waste and mattresses from the Township of Huron-Kinloss. Including all of the segregated waste, a total of 604 tonnes of materials were diverted from both Township landfills (Kinloss and Huron) in 2023.
- 6) In 2023, horizontal groundwater flow on the site was to the east, which is consistent with historical results. A slight upward vertical gradient is present.
- 7) Leachate influences are observed in the shallow aquifer downgradient of the landfill (OW4, OW13S, OW13I, OW15, OW16). Leachate influences are not observed in the silt till underlying the sand and gravel aquifer (OW13D).
- 8) Surface water monitoring indicates the downstream (SW2) water quality east of the landfill is comparable to the upstream (SW1) water quality. For the parameters that were analyzed, PWQO exceedances related to total iron and zinc (SW1) occurred in September 2023. There were no PWQO exceedances in the downstream station SW2 in 2023. It is interpreted that the landfill site does not have a measurable adverse influence on water quality within the creek.
- 9) Reasonable Use parameters and criteria have been developed based on the background results of monitor OW11-16. RUC exceedances related to alkalinity, DOC, hardness and manganese were observed at OW13S, OW13I and OW15. At OW13D, RUC exceedances related to DOC and iron in September 2023 and are attributed to natural groundwater conditions. OW15 also exceeded the RUC for iron in spring and fall 2023. Additionally, DOC and manganese concentrations exceeded the RUC at OW16 in May and September and iron during the September monitoring events.
- 10) Combustible gas monitoring indicates no evidence of the presence of methane gas within the unsaturated overburden at the site.

## 6.0 RECOMMENDATIONS

Based on the foregoing, the following is recommended.

- 1) No remedial measures are required for the site at the present time.
- 2) The monitoring program of semi-annual sampling of the 12 monitoring wells and two surface water stations should continue in 2024. Gas probes GP1, GP2 and GP3 should also continue to be monitored for the presence of combustible gas, including under frozen conditions.

- 3) This report is to be submitted to the MECP for review and comment by March 31, 2024.
- 4) The Township should proceed with the application to amend the current ECA for the site. WSP recommends the following steps.
  - a) Complete a topographic survey of the site, including the CAZ boundaries and tying in the monitoring well network to a geodetic reference point (in metres above sea level).
  - b) Apply for an amendment to the existing ECA for the site, including details related to the temporary closure of the site, estimated remaining site capacity and the CAZ.

**Environmental Compliance  
Approval**

Ministry  
of the  
Environment

Provisional Certificate No. A 272801

## PROVISIONAL CERTIFICATE OF APPROVAL WASTE DISPOSAL SITE

Under The Environmental Protection Act, 1971 and the regulations and subject to the limitations thereof, this Provisional Certificate of Approval is issued to:

Township of Kinloss  
Holyrood, Ontario  
NOG 2B0

for the use and operation of a 6 hectares (15 acre) landfilling site

all in accordance with the following plans and specifications: 1. Plan of operation submitted to the Owen Sound District Office of MDE under cover of a letter dated August 23, 1972. 2. Site plan entitled "Kinloss Township Waste Disposal Site."

Located: Part Lot 16, Concession 6  
Township of Kinloss  
County of Bruce

which includes the use of the site only for the disposal of the following categories of waste (NOTE: Use of the site for additional categories of wastes requires a new application and amendments to the Provisional Certificate of Approval) Domestic, commercial and 10% non-hazardous solid industrial (limited to miscellaneous debris from agriculture such as wire, stumps and scrap metal) wastes.

and subject to the following conditions:

1. No operation shall be carried out at the site after sixty days from this condition becoming enforceable unless this Certificate including the reasons for this condition has been registered by the applicant as an instrument in the appropriate Land Registry Office against title to the site and a duplicate registered copy thereof has been returned by the applicant to the Director.

Dated this 1st day of October

1980

Director, Section 39

## NOTICE

TO: Township of Kinloss  
Holyrood, Ontario  
NOG 2B0

You are hereby notified that Provisional Certificate of Approval No. A 272801 has been issued to you subject to the conditions outlined therein.

The reasons for the imposition of these conditions are as follows:

The reason for the condition requiring registration of the Certificate is that Section 46 of The Environmental Protection Act, 1971 prohibits any use being made of the lands after they cease to be used for waste disposal purposes within a period of twenty-five years from the year in which such land ceased to be used unless the approval of the Minister for the proposed use has been given. The purpose of this prohibition is to protect future occupants of the site and the environment from any hazards which might occur as a result of waste being disposed of on the site. This prohibition and potential hazard should be drawn to the attention of future owners and occupants by the Certificate being registered on title.

You may by written notice served upon me and the Environmental Appeal Board within 15 days after receipt of this Notice, require a hearing by the Board.

This Notice should be served upon:

The Secretary,  
Environmental Appeal Board, AND  
1 St. Clair Ave. West,  
5th Floor,  
Toronto, Ontario.  
M4V 1K7

The Director,  
Section 39

### NOTICE OF AMENDMENT

TO:

Township of Kinloss  
Holyrood, Ontario  
NOG 2B0

*You are hereby notified that the approval issued to you under Certificate of Approval No. A2728 dated October 1, 1980 is hereby amended as follows:*

*The following Condition and corresponding reason is added to the Provisional Certificate of Approval:*

2. *the Municipality shall submit an annual report prepared by their consultant to the Owen Sound District Officer, Ministry of the Environment addressing the following requirements:*
  - 1) *volumes of waste received; remaining capacity and site life expectancy;*
  - 2) *review of operating procedures, and any deficiencies therein*
  - 3) *the results of any surface water or ground water monitoring programs which may be initiated; and*
  - 4) *the extent and success of the recycling program established by the Township.*

*This report is to be submitted each year by March 31<sup>st</sup>, commencing March 31, 1993.*

*The reason for this addition is to ensure that the necessary studies are completed in order to ensure the protection of the natural environment.*

You may by written notice served upon me and the Environmental Appeal Board within 15 days after receipt of this Notice, require a hearing by the Board. Section 142 of the Environmental Protection Act, S.O. 1990 c. E-19, as amended, provides that the Notice requiring the hearing shall state:

The portions of the approval or each term or condition in the approval in respect of which the hearing required, and;  
The grounds on which you intend to rely at the hearing in relation to each portion appealed.

In addition to these legal requirements, the Notice should also include:

The name of the appellant;  
The address of the appellant;  
The Certificate of Approval number;  
The date of the Certificate of Approval;  
The name of the Director;  
The municipality within which the sewage works are located;

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

Secretary,  
Environmental Appeal Board,

AMENDED PROVISIONAL CERTIFICATE OF APPROVAL  
FOR A WASTE DISPOSAL SITE (PROCESSING) NO. A27280.  
Page 1 of 1

## NOTICE OF AMENDMENT

TO: Township of Kinloss  
Holyrood, Ontario  
NOG 2B0

You are hereby notified that the approval issued under Certificate of Approval No. A272801 dated October 1, 1980, including all revisions, is hereby amended to the following:

The following conditions are added:

3. Monitoring of groundwater and surface water at the waste disposal site shall be carried out each year to the satisfaction of the Director of the Southwestern Region of the Ministry of the Environment and Energy.
4. Any changes to the monitoring programs for groundwater or surface water must be approved by the Director of the Southwestern Region of the Ministry of the Environment and Energy in writing.

The reasons for the addition of these conditions are:

3. The reason for Condition 3 is to ensure that the appropriate monitoring takes place so that the environmental impact of the waste disposal site can be assessed.
4. The reason for Condition 4 is to ensure that any changes made to the monitoring programs accurately reflect the impact of the waste disposal site on the natural environment.

The following document is added as supporting information to this Certificate of Approval:

"Township of Kinloss Waste Disposal Site Plan of Operation & Development and Hydrogeologic Assessment" dated December 1991 and prepared by Paragon Engineering Ltd.

This Notice shall constitute part of the approval issued under Certificate of Approval No. A272801 dated October 1, 1980, including all revisions.

# Ontario

April 30, 2003

Mary Rose Walden, Administrator  
PO Box 130  
Ripley, Ontario  
N0G 2R0

Dear Sir/Madam:

**Re: Notification of Change of Name/Address  
MOE Reference Number 1923-5M4HNL**

The Ministry of the Environment (the "Ministry") acknowledges receipt of your letter dated April 10, 2003 requesting a change in company name/address:

**FROM:** The Township of Kinloss  
Holyrood, Ontario  
N0G 2B0

**TO:** The Corporation of the Township of Huron-Kinloss  
PO Box 130  
Ripley, Ontario  
N0G 2R0

By this letter, the Ministry advises you that your notification of change in company name/address has been registered in our records for the following Certificate(s) of Approval:

Certificate(s) of Approval for Waste Disposal Sites, Section 27, EPA:  
A272801

The Ministry will not be providing you with an amended certificate(s) to reflect the change in company name/address. Therefore, this letter must be appended to its corresponding Certificate(s) of Approval. The name/address change will be included in any future amended Certificate(s) of Approval.

If you have any questions regarding the above, please contact me at the above phone number.

Yours truly,

Michael Durst  
Application Processor

N/A = Not Applicable

ND = Not detected

TDL = Typical Detection Limit. Actual detection limit varies with concentration of each sample.  
Reasonable Use Criteria (RUC) were calculated in accordance with MOE Guideline B-7 using 2 years of data for OW7 and OW12 and applying the detection limit as the lower detection limit.

F.1 Chancery 200  
v12, as shown here.

NOTES:

1. All results expresses in mg/L unless otherwise noted.
2. ODWQS is the Ontario Drinking Water Quality Standards, MOE, revised 2001.
3. MAC maximum acceptable concentration ODWQS.
4. IMAC indicates an interim maximum acceptable concentration ODWQS.
5. AO indicates an aesthetic objective ODWQS, not health related.
6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. Shaded values indicate exceedance of ODWQS.

6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. Shaded values indicate exceedance of ODWQS.

NOTES:

1. All results express in mg/L unless otherwise noted.
2. ODWQS is the Ontario Drinking Water Quality Standards, MOE, revised 2001.
3. MAC maximum acceptable concentration ODWQS.
4. IMAC indicates an interim maximum acceptable concentration ODWQS.
5. AO indicates an aesthetic objective ODWQS, not health related.
6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. Shaded values indicate exceedance of ODWQS.

NOTES:

1. All results express in mg/L unless otherwise noted.
2. ODWQS is the Ontario Drinking Water Quality Standards, MOE, revised 2001.
3. MAC maximum acceptable concentration ODWQS.
4. IMAC indicates an interim maximum acceptable concentration ODWQS.
5. AO indicates an aesthetic objective ODWQS, not health related.
6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
11. < indicates parameter not detected above method detection limit.
12. S.E. indicates a sampling error.
13. nd indicates parameter not detected.
14. Shaded values indicate exceedance of ODWQS.

NOTES:

1. All results express in mg/L unless otherwise noted.
2. ODWQS is the Ontario Drinking Water Quality Standards, MOE, revised 2001.
3. MAC maximum acceptable concentration ODWQS.
4. IMAC indicates an interim maximum acceptable concentration ODWQS.
5. AO indicates an aesthetic objective ODWQS, not health related.
6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
11. < indicates parameter not detected above method detection limit.
12. <T indicates a detection of a Trace amount less than the method detection limit.
13. S.E. indicates a sampling error.
14. nd indicates parameter not detected.
15. IS indicates insufficient sample for analysis.
16. Shaded values indicate exceedance of ODWQS.

NOTES:

1. All results express in mg/L unless otherwise noted.
2. ODWQS is the Ontario Drinking Water Quality Standards, MOE, revised 2001.
3. MAC maximum acceptable concentration ODWQS.
4. IMAC indicates an interim maximum acceptable concentration ODWQS.
5. AO indicates an aesthetic objective ODWQS, not health related.
6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
11. < indicates parameter not detected above method detection limit.
12. S.E. indicates a sampling error.
13. nd indicates parameter not detected.
14. IS indicates insufficient sample for analysis.

NOTES:

1. All results expresses in mg/L unless otherwise noted.
2. ODWQS is the Ontario Drinking Water Quality Standards, MOE, revised 2001.
3. MAC maximum acceptable concentration ODWQS.
4. IMAC indicates an interim maximum acceptable concentration ODWQS.
5. AO indicates an aesthetic objective ODWQS, not health related.
6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
11. < indicates parameter not detected above method detection limit.
12. <T indicates a detection of a Trace amount less than the method detection limit.
13. S.E. indicates a sampling error.
14. nd indicates parameter not detected.
15. Shaded values indicate exceedance of ODWQS.

NOTES:

1. All results expresses in mg/L unless otherwise noted.
2. ODWQS is the Ontario Drinking Water Quality Standards, MOE, revised 2001.
3. MAC maximum acceptable concentration ODWQS.
4. IMAC indicates an interim maximum acceptable concentration ODWQS.
5. AO indicates an aesthetic objective ODWQS, not health related.
6. OG indicates an operational guideline ODWQS, not health related.
7. c indicates that the guideline applies to water at the point of consumption.
8. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
9. nd indicates parameter not detected.
10. d, where nitrate and nitrite are present the total of the two should not exceed 10 mg/L.
11. < indicates parameter not detected above method detection limit.
12. S.E. indicates a sampling error.
13. nd indicates parameter not detected.
14. Shaded values indicate exceedance of ODWQS.

TOWNSHIP OF  
HURON-KINLOSS

**RE: Kinloss Landfill Site - 2006 Annual Report**

Dear Mr. Nicol,

We have received a copy of the report titled "Township of Huron-Kinloss 2006 Annual Operations and Monitoring Report, Kinloss Landfill Site", dated March 2007 and prepared by R.J. Burnside & Associates Limited. A copy of the report was sent to the Ministry's technical support section for their review and their comments follow:

The landfill does not appear to be resulting in any major impacts to ground water quality. However, there are some issues that should be addressed in time for the next annual monitoring report.

- Two wells (OW7 and OW12) have traditionally been considered to be "background" wells. Well OW7 is quite often dry during the sampling events, and is thus not ideal as a background well. Well OW12, even though apparently up-gradient of the waste and exhibiting low concentrations of chloride, still exhibits concentrations of some parameters (eg. nitrate, total dissolved solids, sulphate) that are considerably higher than exhibited at other wells (OW5, OW6, OW7). Thus, it is possible that this well samples water that has been impacted by leachate. We are not convinced that either OW7 or OW12 are ideal as background wells.

A discussion about whether another well (eg. OW6) may be more appropriate should be provided. Samples obtained from this well have consistently shown concentrations of indicator parameters that are lower than in waters from OW12. Could this well be considered to be "cross-gradient" to the waste and thus useful as a "background" well?

- The concentrations of sulphate in waters sampled by OW13 and OW13INT are typically elevated, sometimes above the calculated RUG. The consultant has suggested that these are not representative of leachate impact because sulphate concentrations were much lower at Well OW4, which is otherwise more clearly impacted by leachate (eg. elevated

chloride, TDS, etc). Could these high sulphate concentrations be the result of a redox transition along the flowpath between OW4 and OW13? Consider that 1) iron, manganese and ammonia are elevated at OW4, but are significantly less at OW13; and, 2) nitrate and sulphate are not detected and lower, respectively, at OW4, whereas they are both elevated at OW13. These two patterns suggest that reducing conditions prevail around OW4, while oxidizing conditions prevail around OW13. Are the elevated sulphate concentrations a leachate impact? Is there an RUG issue at the eastern property boundary?

- Future reports would benefit from the inclusion of a hydrogeologic cross section. This is a useful tool for the visualization of topography and stratigraphy, and the relationship between the location of the waste, observation wells and property boundaries.
- Are the lands to the east that are leased by the Township a part of a formal Contaminant Attenuation Zone?

The ministry's surface water review did not identify any concerns with the report.

If you have any questions concerning this letter, please contact the undersigned at (519) 371-6191.

Yours truly,

---

## MEMORANDUM

File No. SI BR HK C6 610

**TO:** Ian Mitchell  
District Engineer  
Owen Sound District

**FROM:** Simon Thuss  
Hydrogeologist  
Water Resources Unit – Technical Support Section

**DATE:** August 14, 2015

**RE:** Annual Monitoring Report - 2014  
Kinloss Landfill Site, Township of Huron-Kinloss  
IDS Reference No. 0481-9V5RQD

---

As requested, I have reviewed the following report:

- "Annual Monitoring Report – 2014, Kinloss Landfill Site, Township of Huron-Kinloss" dated March 2015 and prepared by WSP Canada Inc.

The review was limited to the hydrogeological aspects of the landfill monitoring program as presented in the report.

The landfill site is situated on the south half of Lot 16, Concession 6 in the former Township of Kinloss, now within the amalgamated Township of Huron-Kinloss. The landfill site is operated under Provisional Certificate of Approval (C of A) No. A272801, most recently amended in April 2003. It is understood that the acceptance of household waste was discontinued in 2002; however, the site has not been permanently closed. Currently, only recyclable and burnable materials are collected at the site.

The current monitoring network includes eleven monitoring wells and two surface water monitoring stations. Groundwater level monitoring and sample collection is carried out twice per year (typically July and October).

The stratigraphy at the site generally consists of surficial sand or sand and gravel (up to 16.5 metres in

thickness), overlying lower permeability silt till. The shallow groundwater flow within the surficial granular deposit is indicated to be towards the east.

Landfill leachate impacts are observed within the surficial granular deposit downgradient of the landfill at monitoring wells OW4, OW13S and OW13I. Samples collected from these locations are characterized by elevated concentrations of several leachate indicator parameters, including: alkalinity, hardness, chloride, sulphate, nitrate, ammonia, TKN, organic nitrogen, DOC, boron, sodium, iron and manganese.

A Reasonable Use assessment was completed using the measured concentrations of alkalinity, boron, chloride, DOC and sodium. Consistent with previous results, the alkalinity and DOC concentrations at the downgradient monitoring wells continue to exceed the corresponding Reasonable Use Guideline (RUG) criteria.

The Township holds a 99-year lease on a portion of the property to the east of the site for the purpose of establishing a buffer zone for contaminant attenuation; however, the C of A for the site has not been amended to formally recognize this area as a Contaminant Attenuation Zone (CAZ).

Upon completing the review of the 2014 report, the following comments are provided:

1. In a previous letter dated July 16, 2012, the Consultant indicated to the Ministry that the exceedances of the RUG criteria at the OW13 well nest were anticipated to be representative of a "slug" of leachate impacted groundwater flowing past the monitoring point. At that time, the Consultant proposed an additional three years of monitoring to evaluate the groundwater quality at the downgradient property boundary. Given the ongoing exceedances of the RUG criteria at this location, additional work should now be undertaken to delineate the leachate plume and confirm that the impacts are sufficiently attenuated within the buffer area. Ideally, this would be achieved through the installation of additional monitoring wells downgradient of the property boundary; however, it is understood that the area may not be readily accessible by drilling rig. The Consultant is encouraged to discuss the monitoring plan with the Ministry prior to proceeding with the work.
2. As illustrated on Map 3 in the report, the shallow groundwater flow direction is inferred to be towards the east; however, the map indicates that a "drainage divide" is present near the western limit of the landfilled area, suggesting that there may also be a component of groundwater flow to the west in this portion of the site. Consideration should be given to the installation of an additional monitoring well to the west of the fill area to characterize the groundwater quality and flow direction in this area.
3. Monitoring wells OW9 and OW11 are reported to be "inactive" and are not included in the

monitoring program. Based on the borehole logs included in the report, these wells were not installed to a sufficient depth to intersect the shallow groundwater table. Since these wells are not suitable for monitoring, they should be properly abandoned in accordance with Ontario Regulation 903.

4. Monitoring wells OW4 to OW11 were reportedly constructed with slotted ABS pipe installed in excavated test pits. There is some potential that precipitation and surface runoff may "short-circuit" to these wells since the permeability of the backfill would be enhanced relative to the undisturbed native deposits. As such, the groundwater chemistry observed at these locations may not fully represent the ambient shallow groundwater conditions at the site. The Consultant should comment on the integrity of these wells and any implications for the data collected at these locations. Consideration should be given to supplementing the existing monitoring network with properly constructed monitoring wells at key locations to confirm the groundwater conditions in the shallow overburden.
5. The report indicates that hardness, iron and manganese were excluded from the Reasonable Use assessment because the background concentrations of these parameters have typically been elevated relative to the corresponding Ontario Drinking Water Quality Standards (ODWQS). Although the background concentrations may be slightly elevated, the concentrations of these parameters increase significantly downgradient of the landfill and are considered to be representative of leachate impacts. For example, the iron concentration at downgradient well OW4 generally ranges from 10 to 20 mg/L, while the background concentration appears to be less than 1 mg/L. Appropriate RUG criteria for hardness, iron and manganese should be developed and included in the assessment for future reports.
6. Sulphate was not included in the Reasonable Use assessment as this parameter is reportedly present in elevated concentrations in background well OW6; however, a review of the historical data does not support this conclusion. The sulphate concentration in OW6 has ranged between approximately 10 and 26 mg/L over the period of record and appears to be representative of the background groundwater quality. In comparison, the sulphate concentration at downgradient wells OW13S and OW13I have ranged between 252 and 626 mg/L. As such, the elevated sulphate appears to be representative of leachate impacts and should be included in the Reasonable Use assessment going forward.
7. Ammonia appears to be elevated downgradient of the landfill, with concentrations ranging between 15 and 40 mg/L at OW4. Ammonia can be nitrified to produce nitrate and nitrite in aerobic environments. Historically, nitrate concentrations as high as 10 mg/L have been measured in samples collected from OW13S and OW13I, and low concentrations of nitrite have also been occasionally detected in samples from these locations. In comparison, nitrate and nitrite

are typically not detected in the background well OW6. The elevated nitrate and relatively low ammonia concentrations at OW13S / OW13I suggest that nitrification of ammonia is actively occurring in the leachate plume downgradient of the landfill. As such, nitrate and nitrite should also be included in the Reasonable Use assessment.

8. A review of the historical data for OW13S and OW13I suggests that the conditions within the plume at the southeast property boundary may be becoming more reducing over time. Since approximately 2011, the concentration of ammonia in these wells has followed an increasing trend, with a corresponding decrease in the concentrations of nitrate and sulphate. Future monitoring reports should include a discussion of these trends and include time series plots for all key leachate indicator parameters.
9. Several minor editorial errors were noted in the report. Figure 4 (Indicator Parameters – Fall) appears to be missing from the report, and the data for downgradient wells OW13S and OW13I was not included on Figure 3 (Indicator Parameters – Spring). Appendix C appears to be missing the borehole logs for OW13S, OW13I and OW13D.

If you have any questions or require clarification on any of the points provided herein, please contact me at [Simon.Thuss@ontario.ca](mailto:Simon.Thuss@ontario.ca) or 519-873-5033.

Yours truly,

Simon Thuss, P.Geo.

Re: MOECC Response to Kinloss Landfill Site – 2014 Annual Monitoring Report

Dear Mr. Mitchell:

The Township of Huron Kinloss (Township) has asked WSP Canada Ltd. (WSP) to form a response to the technical memorandum generated by Mr. Simon Thuss on August 14, 2015 regarding the Kinloss Landfill Site. The following nine (9) points are intended to be in response to the nine (9) points in Mr. Thuss' memorandum:

1. The continued presence of impacts at OW13S and OW13I suggest landfill impacted water may persist in this portion of the Site. WSP agrees with the Ministry of the Environment and Climate Change (MOECC) recommendation for installation of additional monitoring wells downgradient of the OW13 well nest. However, as the lands are within the leased buffer lands (Legal CON 6 PT LOT 17 PT LOT 18, comprising 43.5 ha or 107.5 ac owned by Barry Johnston), which act as a contaminant attenuation zone (CAZ), some discussion with the landowner may be required. The presence of the small tributary of Kinloss Creek and the high water table in the vicinity of the OW13 well nest are factors that must be taken into consideration. WSP recommends the installation of one (1) shallow (+/-6 m) monitoring well adjacent to the west side of the tributary, directly downgradient of the OW13 well nest. This monitoring well would be installed in order to investigate the groundwater adjacent to the tributary. WSP proposes one (1) additional shallow (+/-6 m) monitoring well be installed on the east side of the tributary. This well will serve as confirmation that leachate impacts to groundwater are not leaving the buffer lands, and will also allow refinement for increased interpretation of the groundwater contours and flow direction in the buffer lands. These two (2) monitoring wells will allow RUG compliance to be determined at the eastern boundary.

Drilling of the proposed monitoring wells within a wetland may pose access challenges requiring road construction and winter drilling to enable O. Reg. 903 to be complied with, regarding water around the casing. WSP proposes to scout suitable locations for the wells during the Fall 2015 monitoring event at the landfill.

2. The drainage divide represented in Maps of the Kinloss Waste Disposal Site is expected to impact overland surface water flow at the Site, but not significantly impact groundwater flow, which is predominantly to the east, and largely affected by the soil stratigraphy. Furthermore, the waste is landfilled downgradient (east) of this divide.
3. The Township will explore the option of deepening wells OW9 and OW11 to intersect the water table at these locations. This would further refine groundwater contours upgradient of the waste and provide insight into the possible impacts of the nearby run off water divide on the nearby flow direction of groundwater, as discussed by the MOECC in Comment 2.
4. WSP acknowledges that implementation of wells in test pits is not an ideal method of installation and may lead to biased sampling results. However, OW11-85 is one of the upgradient "dry" monitoring points. Effectively, it is unlikely that leachate will be able to impact this location. Further, the wells were installed in 1985. Ergo, it is reasonable to assume that they have established an equilibrium with the surrounding shallow aquifer. Effectively, WSP recommends retaining the shallow OW4-85, referenced by the MOECC in Comment 4, as is, in order to continue to evaluate the long term trend of groundwater down gradient of the waste without changing the well, which may alter the existing trend.

In addition, WSP inspects the wells during each field monitoring event. Any required maintenance or well conditions that are felt to not reflect actual groundwater conditions are reported and passed on to the Township. The Township then deals with these concerns within a reasonable time frame. WSP proposes to continue the field screening of well integrity in the future and continuation of this method of maintenance.

5. WSP acknowledges that iron, hardness and manganese are commonly used in defining leachate impacts. WSP will give further consideration to the inclusion of these parameters in future RUG guidelines.
6. WSP acknowledges that sulphate is commonly used in defining leachate impacts. WSP will give further consideration to the inclusion of this parameter in future RUG guidelines.

7. Ammonia may be nitrified to produce nitrate and nitrite in oxidizing environments. As noted by the MOECC in Comment 5, iron and manganese are elevated in the downgradient groundwater. The dissolved presence of iron and manganese parameters is only possible in reduced environments, albeit, this only typically occurs at a lower pH than observed in the field and laboratory sampling. Effectively, the groundwater environment downgradient of the landfill appears to be highly reduced.

WSP suspects that other factors may be affecting the concentration of nitrate at this location, and that mixing of oxidized and reduced groundwater may be occurring in this location. This statement formed a part of the reasoning behind the original suspicion of the leachate impacts at OW13S and OW13I being a slug moving through the down gradient area. WSP believes that further investigation should be conducted on this topic before acceptance of these parameters in the RUG.

8. WSP agrees with Comment 8 and suggests incorporation of our response for this comment with those of Comment 7.
9. Editorial comments noted.

Dear Mr. Nichol,

**RE: Kinloss Landfill Site - 2015 Annual Report**

We have received a copy of the report titled "Annual Monitoring Report – 2015, Kinloss Landfill Site, Township of Huron-Kinloss" dated March 2016 and prepared by WSP Canada Inc. A copy of this report was forwarded to our Regional Technical Support Section and comments from our Regional Hydrogeologist are provided in the attached memorandum.

If you have any questions concerning the attached, please contact the undersigned at (519) 371-6191.

Yours truly,

Ian Mitchell, P.Eng.  
District Engineer

**DATE:** August 9, 2016

**RE:** Annual Monitoring Report - 2015  
Kinloss Landfill Site, Township of Huron-Kinloss  
IDS Reference No. 3866-A7VQE

As requested, I have reviewed the following report:

- "Annual Monitoring Report – 2015, Kinloss Landfill Site, Township of Huron-Kinloss" dated March 2016 and prepared by WSP Canada Inc.

The review was limited to the hydrogeological aspects of the landfill monitoring program as presented in the report.

The landfill site is situated on the south half of Lot 16, Concession 6 in the former Township of Kinloss, now within the amalgamated Township of Huron-Kinloss. The landfill site is operated under Provisional Certificate of Approval (C of A) No. A272801, most recently amended in April 2003. It is understood that the acceptance of household waste was discontinued in 2002; however, the site has not been permanently closed. Currently, only recyclable and burnable materials are collected at the site.

I previously reviewed the 2014 Annual Report for the Kinloss Landfill Site, with comments provided in a memorandum dated August 14, 2015. WSP Canada Inc. responded to these previous comments in a letter dated October 8, 2015.

In response to my previous comments, the Consultant has proposed to carry out some additional site

work in 2016. As detailed in the October 8, 2015 letter and the 2015 Annual Report, monitoring wells OW9 and OW11 will be deepened/replaced, facilitating better characterization of the background groundwater quality and the groundwater flow direction in the western portions of the site. In addition, two new monitoring wells will be installed downgradient of the OW13 well nest to evaluate groundwater quality within the leased buffer lands to the east of the site.

Consistent with data collected in previous years, in 2015 landfill leachate impacts were observed within the surficial granular deposit downgradient of the landfill at monitoring wells OW4, OW13S and OW13I. Samples collected from these locations are characterized by elevated concentrations (relative to background) of several leachate indicator parameters, including: alkalinity, hardness, chloride, sulphate, nitrate, ammonia, TKN, organic nitrogen, DOC, boron, sodium, iron and manganese.

A Reasonable Use assessment was completed using the measured concentrations of alkalinity, boron, chloride, DOC and iron. Consistent with previous results, concentrations of alkalinity (at OW13S and OW13I) and DOC (at OW13I spring 2015 only) continue to exceed the corresponding Reasonable Use Guideline (RUG) criteria.

Upon completing the review of the 2015 report, the following comments are provided:

1. In response to my previous comments, the Consultant re-evaluated the RUG criteria and added iron to the list of parameters used in the assessment for the 2015 annual report. I maintain my opinion that several other parameters (including at least hardness, manganese and sulphate) should also be included in the RUG assessment as these parameters are elevated in the downgradient wells and are thus indicative of leachate impacts at the Kinloss Landfill site.

For example, using the average background concentrations measured at OW6 between 2007 and 2015, the RUG criteria for hardness and sulphate would be approximately 285 and 133 mg/L, respectively. A RUG criterion of 0.23 mg/L for manganese could also be developed using the maximum background concentration observed at OW6 (May 2015).

Given these values, the current concentrations of hardness and sulphate at both OW13S and OW13I would exceed the RUG criteria (in addition to the exceedances of alkalinity and DOC identified by the Consultant). Though not considered a compliance point, samples from OW4 would also exceed the RUG criteria for alkalinity, DOC, hardness, iron and manganese. The inclusion of these additional parameters in the RUG assessment provides a more comprehensive evaluation of the leachate impacts to groundwater quality downgradient of the landfill.

All relevant indicator parameters (i.e. all parameters which are elevated above background concentrations within the leachate or downgradient of the landfill) should be included in the RUG

assessment for future monitoring reports. This will be of particular importance when evaluating the groundwater quality within the leased buffer lands to the east of the site.

2. The elevated concentrations of ammonia in samples from OW4 (typically >20 mg/L) and OW13S/OW13I (typically 0.5 to 3.6 mg/L) are indicative of leachate impacts. Although reducing conditions are anticipated within the leachate plume near OW4 and OW13, it is anticipated that the ammonia may be converted to nitrate where the plume mixes with more oxic groundwater downgradient of the site. Accordingly, my previous comments recommended that nitrate and nitrite should be included in the RUG assessment in future reports.

It is acknowledged that the RUG assessment may be complicated by the presence of organic nitrogen within the shallow aquifer. For example, elevated concentrations of organic nitrogen and TKN have been historically measured in samples from the background well OW6. However, concentrations of other nitrogen compounds (ammonia, nitrate, nitrite) are typically low at this location (<0.3 mg/L for ammonia, nitrate and nitrite not detected).

The use of nitrate and nitrite in the RUG assessment should be reconsidered once additional data is available to characterize groundwater quality upgradient and downgradient of the landfill (i.e. new wells to be installed in 2016).

3. The 2015 annual report suggests that groundwater quality appears to be improving at OW13S and OW13I since (aside from alkalinity), only DOC was identified above the RUG criteria in OW13I during the spring 2015 monitoring event. However, as detailed in the two comments above, this evaluation does not consider the other relevant leachate indicator parameters.

A review of the historical data suggests that the concentration of several leachate indicator parameters (primarily chloride, sulphate, hardness, alkalinity and conductivity) at OW13S and OW13I peaked in approximately 2007. The chloride concentration has since decreased significantly and is now starting to approach background concentrations. Although hardness, sulphate and conductivity have also followed a declining trend since approximately 2007, these parameters are still significantly elevated relative to background conditions. This data suggest that while there has been some improvement in groundwater quality at the OW13 well nest since 2007, this location remains impacted by leachate.

Future reports should include time-series plots for key indicator parameters (in addition to chloride) to further characterize any trends in groundwater quality at the site.

4. There appears to be two minor errors in the calculated RUG criteria as summarized in Table 4 of the 2015 annual report. Since boron is considered a "health-related" parameter, a constant of 0.25

should be used in the RUG calculation. Accordingly, given the average background concentration of 0.023 mg/L, and an ODWS IMAC of 5 mg/L, the RUG criterion for boron should be 1.27 mg/L.

The RUG criterion for iron (0.5 mg/L) is less than the average background concentration (0.7 mg/L). In cases where the background concentration exceeds the applicable ODWS, it is suggested that the RUG criterion be set at the maximum observed background concentration (1.4 mg/L for iron at OW8).

All RUG criteria should be re-evaluated once additional background data becomes available.

If you have any questions or require clarification on any of the points provided herein, please contact me at [Simon.Thuss@ontario.ca](mailto:Simon.Thuss@ontario.ca) or 519-873-5033.

Yours truly,

Simon Thuss, P.Geo.

RECEIVED

SEP 17 2018

September 13, 2018

Mr. Hugh Nicol  
Township of Huron-Kinloss  
PO Box 130  
21 Queen Street  
Ripley ON N0G 2R0

Dear Mr. Nicol,

**RE: Kinloss Landfill 2017 Annual Report**

We have received a copy of the report titled “Annual Monitoring Report (2017), Kinloss Landfill Site” dated March 2018 and prepared by WSP. Staff from our technical support section reviewed the above report, as well as the 2016 annual report, and our regional hydrogeologist provides the following comments on the hydrogeological aspects of the 2016 and 2017 annual reports. Our hydrogeologist attended the site on September 5, 2018, to supplement his understanding of the conditions on the site and surrounding area.

Consistent with data collected in previous years, the 2016/2017 data indicates leachate impacts within the surficial granular deposit downgradient of the landfill at monitoring wells OW4, OW13S and OW13I. Samples collected from these locations are characterized by elevated concentrations (relative to background) of several leachate indicator parameters, including: alkalinity, hardness, sulphate, nitrate, ammonia, TKN, DOC, boron, sodium, iron and manganese.

Based on data collected from the new downgradient monitoring wells, offsite leachate impacts appear to extend to at least OW15, with elevated concentrations of several leachate indicator parameters at this location. The groundwater chemistry observed at OW16 appears to be consistent with background conditions at the site. It is noted that the saturated organic soils in the area of OW15 and OW16 may influence the shallow groundwater chemistry for these wells (e.g. DOC, manganese).

Upon reviewing the 2016 and 2017 monitoring reports for the Kinloss landfill site, the following comments are provided:

1. In response to previous review comments, the Consultant has argued that it is “excessive” to include several parameters (including nitrate and nitrite) in the Reasonable Use Assessment. The Consultant has claimed that certain parameters (e.g. manganese and

sodium) are redundant since other parameters (iron and chloride) are already being evaluated. Based on this response, it appears that there may be some misunderstanding regarding the purpose of the Reasonable Use assessment. The Reasonable Use assessment is not intended as a simple test to identify the presence or absence of leachate in groundwater. The Reasonable Use Guideline establishes procedures for determining what constitutes the reasonable use of groundwater on property adjacent to sources of contaminants, and establishes limits on the discharge of contaminants from landfill sites and other waste disposal facilities. Given the many factors that can affect the geochemical conditions within the leachate plume (e.g. heterogeneous distribution of waste, weathering/decomposition of waste over time, changing redox conditions over time and/or distance along the plume), the critical contaminants with respect to Reasonable Use may vary by time and monitoring location at a given site.

For these reasons, the Reasonable Use assessment should consider all contaminants that potentially originate from the landfill site. In general, the standard practice used at other similar landfill sites is to develop Reasonable Use criteria for all parameters that have corresponding drinking water standards. In completing the assessment, consideration is given to other sources of contamination that may affect specific monitoring locations (e.g. road salt impacts adjacent to roadways).

If the Consultant requires additional guidance on this issue, a teleconference or meeting can be scheduled to discuss these concerns.

2. Specific to nitrate and nitrite, the Consultant believes that these parameters should not be included in the Reasonable Use Assessment “due to the typical lack of these parameters in reducing groundwater conditions, typically associated with leachate impacted groundwater”.

It is our hydrogeologist’s opinion, as previously stated, that elevated concentrations of ammonia have been observed downgradient of the landfill, and that ammonia may potentially be nitrified to produce nitrate and nitrite as the plume mixes with more oxic groundwater downgradient of the site. Accordingly, nitrate and nitrite should be included in the Reasonable Use assessment. It is acknowledged that nearby sources (e.g. agricultural activities or decomposition of organic nitrogen) may also contribute to nitrate in groundwater.

3. There appears to be a calculation error in the Reasonable Use criterion for hardness. As shown in Table 4, the Reasonable Use criterion for hardness (248 mg/L) is less than the background concentration measured at OW11-16 (396 mg/L). In cases where the background concentration exceeds the applicable drinking water standard, it is suggested that the Reasonable Use criterion be set at the maximum observed background concentration.
4. The report should include an updated east-west cross-section, including the new wells OW11-16, OW15 and OW16. The cross-section should include the interpreted stratigraphy, limits of the waste, and current groundwater levels.

5. The ECA should be amended to formally recognize the leased buffer lands as a Contaminant Attenuation Zone for the site.
6. As previously recommended, the report should include time series plots for several key indicator parameters (in addition to chloride). The purpose of these plots is to further characterize any groundwater quality trends at the site.

Please contact me at (519) 371-6191, if you would like to arrange a teleconference to discuss the above comments or if you have any questions concerning this letter.

Yours truly,

---

October 2, 2018

Mr. John Yungblut  
Township of Huron-Kinloss  
PO Box 130  
21 Queen Street  
Ripley ON N0G 2R0

Dear Mr. Yungblut

**RE: Kinloss Landfill 2017 Annual Report**

Further to my letter to the municipality dated September 13, 2018, containing groundwater comments for the Kinloss Landfill Site 2017 Annual Monitoring Report, our regional surface water specialist has reviewed the annual report and provides the following comments:

This site is currently mothballed. The site is currently capped and the landfill has not accepted waste since August 2002. Only recyclables are collected and transferred from the site (page 2). Surface water sampling is completed in spring and fall from two sites (upstream and downstream) from a creek running adjacent to the landfill.

Page 13 of the report notes that only zinc exceeded the PWQO in the downstream (SW2) location. A subsequent duplicate was collected and it was determined that upstream (SW1) also exceeded the PWQO for zinc.

All sampled parameters remain within historical norms (Appendix G.2); accordingly there are no surface water issues associated with the site.

No changes are recommended to the surface water monitoring program for 2018 (page 18). Our surface water reviewer has no additional comments.

If you have any questions concerning this letter, please contact me at (519) 371-6191.

Yours truly,

A handwritten signature in black ink that reads "Ian Mitchell".

**Subject: Response to MECP Comments on 2017 Annual Monitoring Report - Kinloss Landfill**

Dear Mr. Mitchell:

Thank you for providing WSP Canada Inc. (WSP) with the opportunity to review the comments prepared by the Ontario Ministry of the Environment, Conservation and Parks (MECP) (Southwestern Region) on September 13, 2018 following their hydrogeologist's review of the 2017 Annual Monitoring Report (2017 AMR), Kinloss Landfill Site (Site), dated March 2018 as prepared by WSP. WSP has also received comments from MECP dated October 2, 2018 relating to the surface water monitoring.

WSP have reviewed the September 13, 2018 comments (restated below in italics) and have prepared the following responses for your consideration. These responses may influence the scope of work required by WSP to address these comments to the satisfaction of the MECP. No comments are required with respect to the October 2, 2018 letter.

In preparing our response to the September 13, 2018 comments, WSP reviewed the content of the 2017 AMR and consulted our team responsible for landfill monitoring in other jurisdictions. We have proposed a solution to become more consistent with the MECP expectations and to provide more clarity with respect to the task of monitoring to identify potential impacts related to the inactive landfill. In addition to a response to each comment, WSP has prepared a concise list of recommended actions to be followed for the preparation of the 2018 AMR, pending direction from the Township of Huron-Kinloss (Township) and agreement from MECP (where appropriate).

- 1** *In response to previous comments, the consultant has argued that it is "excessive" to include several parameters (including nitrate and nitrite) in the Reasonable Use Assessment. The Consultant has claimed that certain parameters (e.g. manganese and sodium) are redundant since other parameters (iron and chloride) are already being evaluated. Based on this response, it appears that there may be some misunderstanding regarding the purpose of the Reasonable Use assessment. The Reasonable Use assessment is not intended as a simple test to identify the presence or absence of leachate in groundwater. The Reasonable Use Guideline establishes procedures for determining what constitutes the reasonable use of groundwater on property adjacent to sources of contaminants, and establishes limits on the discharge of contaminants from landfill sites and other waste disposal facilities. Given the many factors within the leachate plume (e.g. heterogeneous distribution of waste, weathering/decomposition of waste over time, changing*

WSP Canada Inc.

*redox conditions over time and/or distance along the plume), the critical contaminants with respect to Reasonable Use may vary by time and monitoring location at a given site.*

*For these reasons the Reasonable Use assessment should consider all contaminants that potentially originate from the landfill site. In general, the standard practice used at other similar landfill sites is to develop Reasonable Use criteria for all parameters that have corresponding drinking water standards. In completing the assessment, consideration is given to other sources of contamination that may affect specific monitoring locations (e.g. road salt impacts adjacent to roadways).*

*If the Consultant requires additional guidance on this issue, a teleconference or meeting can be scheduled to discuss these concerns.*

WSP understands the purpose of the Reasonable Use Assessment process. It is our experience that there is some flexibility in the application of this approach between MECP jurisdictions. The approach followed at this site has been based on observations that this is an inactive landfill site where the impacts from ongoing generation of landfill leachate appear to be reducing naturally (see discussion in response to point 6) and the interest of our client to work to minimize efforts related to ongoing monitoring and reporting associated with inactive landfills.

Review of the available monitoring data indicates that the current monitoring program includes the following parameters that have an Ontario Drinking Water Quality Standard (ODWQS) value:

- Alkalinity
- Chloride
- Nitrate\*
- Nitrite\*
- Organic Nitrogen\*
- Dissolved Organic Carbon
- Sulphate
- Hardness
- Aluminum\*
- Barium\*
- Boron
- Cadmium\*
- Chromium\*
- Copper\*
- Iron
- Lead\*
- Manganese
- Sodium\*, and
- Zinc\*.

In response to the MECP comment, WSP proposes to calculate Reasonable Use Criteria (RUC) for this entire suite of parameters based on the concentrations measured at background well (OW11-16). Parameters marked with an asterisk are not currently included in the evaluation of reasonable use criteria (Tables 4 and 4A). Note that the observed concentrations of many of the metals parameters are less than the method detection limits.

*Specific to nitrate and nitrite, the Consultant believes that these parameters should not be included in the Reasonable Use Assessment “due to the typical lack of these parameters in reducing groundwater conditions, typically associated with leachate impacted groundwater.*

*It is our hydrogeologist's opinion, as previously stated, that elevated concentrations of ammonia have been identified downgradient of the landfill and that ammonia may potentially be nitrified to produce nitrate and nitrite as the plume mixes with more oxic groundwater downgradient of the site. Accordingly, nitrate and nitrite should be included in the Reasonable Use assessment. It is acknowledged that nearby sources off agricultural activities or decomposition of organic nitrogen) may also contribute to nitrate in groundwater.*

WSP agrees that RUC values are to be calculated for nitrate and nitrite as there is a drinking water quality objective for these values. WSP has consulted our team involved in landfill monitoring across Ontario and have found that a variety of approaches are used to monitor nitrogen transformations in areas where there is anaerobic water in which ammonia is the stable form of nitrogen species (and where nitrate and nitrite are typically absent). As there is no drinking water standard available for ammonia, WSP proposes to use the RUC calculated for nitrate (as N) to identify situations when concentrations of ammonia (as N) have potential to transform to nitrate. This approach may show some historical circumstances where elevated ammonia concentrations have been elevated relative to the RUC value, but overall recent samples are likely to comply. WSP would like to have confirmation from MECP that this approach will be acceptable.

**2** *There appears to be a calculation error in the Reasonable Use criterion for hardness. As shown in Table 4, the Reasonable Use criterion for hardness (248 mg/L) is less than the background concentration measured at OW11-16 (396 mg/L). In cases where the background concentration exceeds the applicable drinking water standard, it is suggested that the Reasonable Use criterion be set at the maximum observed background concentration.*

WSP has reviewed Tables 4 and 4A in the 2017 AMR and have observed that some of the RUC reported in the 2017 AMR are in error.

Firstly, the method employed by WSP to calculate the RUC for Hardness as presented in Table 4 is based on the average parameter values observed at OW6 between 2007 and 2015. The value for Hardness shown in Table 4 was obtained using the formula provided in the guidance is 179 mg/L. This value does not reflect the direction that a maximum background value is to be used when background concentrations are greater than the ODWQS value. Note that the background concentrations were considered for some parameters (eg. Iron and manganese).

To be correct in terms of the MECP comment provided above, this value is to reflect the maximum hardness value observed, which would be 284 mg/L. The RUC values for hardness presented in Table 4 have not been updated to reflect monitoring data obtained since 2016 and have consistently used the calculated value for hardness and not the maximum value.

Secondly, Table 4A in the 2017 AMR presents the RUC calculated using OW11-16 as the background monitor and this table shows a RUC for Hardness of 248 mg/L. This RUC value was calculated using the formula provided in the guidance, and does not reflect the maximum background value. Use of the maximum value observed at OW11-16 would increase the RUC value to 296 mg/L and would reduce the number of occurrences of an exceedance of the RUC in the monitoring. Hardness continues to be elevated in the monitoring wells downgradient of the landfill.

Review of the chloride concentrations for OW11-16 indicates that this well can reasonably be considered as reflecting background water quality, however the hardness values are elevated relative to OW5, OW6, OW7, OW13-D (most events); and OW16. Hardness values appear to be elevated at wells where landfill leachate is present.

Table 4 has continued to be used to present reasonable use values based on OW6 as background as there is a longer data record available for OW6 relative to OW11-16. This practice is explained in the

2017 AMR. WSP understands that OW11-16 was installed with the expectation that this would be used in the future as the background well once sufficient data is available (three years).

WSP proposes that for the 2018 report, that the reasonable use calculations be updated to reflect use of OW11 as the background well and to ensure that the calculation consistently reflects the practice of assuming the maximum value when the background value is higher than the drinking water quality objective. This is a reasonable approach for Hardness in Ontario, as most groundwater has hardness values that are greater than the range for the ODWQS.

In review of the RUC calculations, WSP also noted that the RUC for Manganese in Table 4 did not reflect that background concentrations at OW6 were greater than the ODWQS. The corrected value for the RUC is 0.23 mg/L.

- 3** *The report should include an updated east-west cross-section, including the new wells OW11-15, OW15 and OW16. The cross-section should include the interpreted stratigraphy, limits of the waste, and current groundwater levels.*

The current cross-section was prepared by a previous consultant, prior to the installation of OW11-15, OW15 and OW16. WSP agrees that this section line can be updated to reflect new data along an “approximate flowpath” from OW11-16 through OW14, OW4, OW13 (3 levels), OW15 and OW16. WSP also recommends including the surface water feature on the cross-section to better reflect the groundwater flow path.

Although WSP agrees that this section line can be updated, we do not believe that presentation of this section line will change the understanding of conditions, although it will more clearly illustrate the current distribution of monitoring points along the primary groundwater flowpath beneath and downgradient of the landfill and discharge relationships to the stream.

- 4** *The ECA should be amended to formally recognize the leased buffer lands as a Contaminant Attenuation Zone for the site.*

WSP notes that this landfill is currently operating under amended Certificate of Approval No. A272901. WSP agrees that it is appropriate to update the amended Certificate of Approval No. A272901 for this site to an Environmental Compliance Approval (ECA) to recognize the leased buffer lands as a Contaminant Attenuation Zone (CAZ). Assistance from MECP is requested to ensure that the Township understands the technical effort, including costs to negotiate with MECP, associated with submitting the request to update the Certificate of Approval to an ECA.

- 5** *As previously recommended, the report should include time series plots for several key indicator parameters (in addition to chloride). The purpose of these plots is to further characterize any groundwater quality trends at the site.*

The trend plots presented for chloride illustrate an interesting trend for the conservative contaminant parameters associated with landfill leachate. Chloride concentrations show that a pulse of elevated concentrations passed OW4 between 2000 and 2010. Since 2010, the chloride concentrations at this location have remained low. A similar pulse has been observed to pass through other monitoring locations (OW14 – 2003-2007; OW13D – 2013; OW13-I – 2004-2014 (although tail continues to 2017). These data show that the highest concentrations at downgradient monitors is substantially lower than was observed at OW4-85. These trends are consistent with what would be expected from a landfill that closed in 2002.

This type of trend indicates that the primary release of contaminants from this source occurred as a pulse that is now reflected by concentrations that are less elevated relative to background than the original.

With this as the typical behaviour shown for a conservative parameter from the landfill, a non-conservative parameter would be expected to behave in one of two ways:

- 1 Follow a similar trend of a pulse passing through with a lower peak concentration and a shorter time (due to degradation/transformation). Peak concentrations would be observed at distances further downgradient along the flowpath.
- 2 For a parameter that is stable in anoxic conditions within a landfill leachate, the above trend could be accompanied by an increase in concentrations of the oxygenated species (for example ammonia would transform to nitrate/nitrite; sulphide would transform to sulphate). Typically, the profile of the second species would also form a pulse (potentially with a longer tail).

WSP agrees that there may be benefit in revisiting the presentation of trend plots, to confirm that these “pulse trends” are occurring and that there are no trends of increasing parameter concentrations in a downgradient well. The current trend plots (Figure 4) do not clearly show the pulses, nor allow the reader to distinguish trends at different spots along the flow path.

WSP proposes to replace the current trend plot in Figure 4 (Chloride vs time) with additional trend plots for select parameters along a profile that corresponds to the primary flow path through the site. This flowpath would be defined by OW11-16 (upgradient) OW14; OW4; OW13-I; OW15 and OW16. Concentration trend plots for selected parameter would be plotted on an individual graph and presented on a single page for these six monitors. A page would be prepared for the following parameters: Chloride, Boron, Barium, Sulphate, Ammonia, Nitrate, and DOC. WSP has prepared this list based on the list of indicator parameters and the suitability of these parameters to reflect the presence of potential contaminants in both an anaerobic or aerobic groundwater state and a range of solute velocities in groundwater. Other parameters can be plotted in the event that evidence of an increasing trend is observed at a downgradient monitor. The graph scales will be selected to be consistent for the available monitoring record and for the observed concentration range of each parameter.

## RECOMMENDED ACTIONS

Pending authorization from the Township of Huron-Kinloss and agreement of MECP, WSP proposes to consider incorporating the following changes in the 2018 AMR.

- 1 Prepare updated RUC calculations for all parameters with a drinking water standard. The complete list of parameters is presented in response to comment 1. A Reasonable Use criterion value for ammonia (as N) will be developed based on the Nitrate (as N) concentration and ODWQS to reflect the potential risks associated with transformation of ammonia to nitrate. Updated RUC calculations will reflect average background concentrations at OW11-16 and, where background values are higher than the drinking water quality objective, the maximum value observed at OW11-16. The RUC will be updated in each annual report as new background values are calculated each year. These are values are expected to be relatively stable moving forward as a longer data record is available for OW11-16. Moving forward, Table 4A will replace Table 4.
- 2 Prepare an updated plan and cross-section along the groundwater flow path as requested by MECP. This updated section will illustrate the new wells and will include the surface water course. This drawing will need to be regenerated as the current drawing was prepared by others and has not been updated regularly.
- 3 Initiate the process to amend the ECA to formally recognize the leased buffer lands as a Contaminant Attenuation Zone for the site.
- 4 Replace Figure 4 with a series of trend plots to illustrate parameter concentration changes over time at key points in the groundwater flow path for a series of parameters that are associated with the landfill leachate. Plots would be prepared to illustrate parameter concentration trends for:

OW11-16 (upgradient) OW14; OW4; OW13-I; OW15 and OW16 in separate graphs presented on a single page. Graphs would be prepared for the following parameters that reflect the presence of landfill impacts: Chloride; Boron, Barium, Sulphate; Ammonia; Nitrate; and DOC. Plots on each page will be prepared with consistent time scales and concentration scales to illustrate the changes in concentration along the flow path over time. Review of this figure will focus on identifying potential presence of increasing parameter trends, particularly in locations downgradient of the landfill. When increasing trends are observed, WSP shall review data for other parameters and prepare additional trend plots.

- 5 WSP believes that these updated concentration trend plots will effectively replace the current bar graphs presented as Figure 3 as well as Figure 4, and request that MECP provide direction that the current Figure 3 may also be removed/replaced.

WSP will be pleased to provide the Township with a fee estimate to reflect the additional effort required to address the MECP concerns and update the 2018 reports in accordance with these recommendations upon agreement to the proposed changes by MECP and to prepare the ECA amendment.

Please feel free to contact us to discuss these comments.

Dear Mr. Yungblut,

Re: Kinloss Landfill 2019 Annual Report  
MOE File: SI BR HK C6 610

We have received a copy of the report titled “2019 Annual Monitoring Report, Kinloss Landfill Site”, dated July 2020, and prepared by WSP. A copy of this report was forwarded to our Regional Technical Support Section for review. Our Regional Hydrogeologist reviewed the report and provides the following comments limited to the hydrogeological aspects of the landfill monitoring program as presented in the 2019 report.

The results of the 2019 groundwater monitoring program were generally consistent with data collected in previous years. Leachate impacts are observed in monitoring wells downgradient of the landfill, including OW4, OW13S, OW13I and OW15. Samples collected from these locations are characterized by elevated concentrations of several leachate indicator parameters in excess of the Reasonable Use Guideline (RUG) criteria, including alkalinity, hardness, iron, DOC and manganese. Iron, DOC, and manganese are also slightly elevated at several upgradient or cross-gradient locations, indicating that there is some natural variability in the background concentration of these parameters. Samples collected at OW16 continue to return results similar to background groundwater quality, indicating that the leachate plume is sufficiently attenuated on the downgradient property.

Upon reviewing the 2019 monitoring reports for the Kinloss landfill site, the following comments are provided:

1. Section 3.5 of the report argues that it is “excessive” to include several parameters (including nitrate and nitrite) in the Reasonable Use Assessment. However, as detailed in the December 13, 2018 letter from WSP, the consultant has previously agreed to include these parameters in the assessment. As mentioned previously, if the Consultant requires additional guidance on this issue, it is recommended that a teleconference be scheduled to discuss these concerns.

2. As detailed in the December 13, 2018 letter from WSP, the consultant has proposed to use the RUG criterion for nitrate (as N) to set a compliance limit for the concentration of ammonia at the boundary well locations. It is suggested that that a compliance criterion for ammonia is not needed at this time, provided that the downgradient ammonia concentration remains low and nitrate and nitrite are included in the RUG assessment going forward.

In the letter dated December 13, 2018, from WSP, they acknowledged that the ECA should be amended to formally recognize the CAZ on the leased lands located to the east of the site. Could you please provide an update on the status of the ECA amendment application to recognize the leased buffer lands as CAZ.

If you have any questions concerning this letter or the attached memo, please contact me at (519) 374-1388.

Sincerely,

Ian Mitchell  
District Engineer  
Owen Sound District

Dear Mr. Yungblut,

Re: Kinloss Landfill 2019 Annual Report  
MOE File: SI BR HK C6 610

Further to my letter to you dated November 30, 2020, containing groundwater comments for the Kinloss Landfill Site 2019 Monitoring Report, our regional surface water specialist has reviewed the 2019 annual report.

During 2019 monitoring year, surface water samples were collected on June 12 and November 20 from SW1 and SW2 locations. The samples were analyzed for field parameters, general chemistry, nutrients and selected metals. The following is a summary of analytical results:

- The PWQO for aluminum exceeded in both SW1 and SW2 samples collected on June 12, 2019.
- The PWQO for iron also exceeded in SW1 sample collected on November 20, 2019.
- Other water quality parameters were measured below PWQO, where available.

Our surface water reviewer has the following comments based the 2019 surface water monitoring data for the Kinloss Landfill Site:

1. Measured concentrations of aluminum and iron in 2019 samples were slightly higher than their concentrations reported for past monitoring events. Since levels higher than PWQO were also measured in samples collected from the upstream location, no action is required at this time.
2. In general, water quality measured at both, upstream and downstream, surface water monitoring locations is similar and therefore suggest that the landfill Site does not have significant adverse effects on the Creek's water quality.
3. It is agreed that surface water monitoring should continue as per the requirements of the current ECA.

If you have any questions concerning this letter, please contact me at (519) 374-1388.

Sincerely,

Ian Mitchell  
District Engineer  
Owen Sound District

### **NON-COMPLIANCE/NON-CONFORMANCE ITEMS**

The following item(s) have been identified as non-compliance/non-conformance, based on a "No" response captured for a legislative or best management practice (BMP) question (s), respectively.

#### **Question Group: Other Inspection Findings**

Question ID	949100	
Question	Question Type	Legislative Requirement
Were the inspection questions sufficient to address other identified non-compliance items?	Legislative	Not Applicable
<b>Observation/Corrective Action(s)</b>		
The following instances of non-compliance were also noted during the inspection: The Environmental Compliance Approval should reflect the current status of the site. In this case the site is temporarily closed. The ECA does not reflect this situation and needs to be amended. It appears this amendment requirement was missed when the site changed operational status a number of years ago.		

#### **Question Group: Records / Reports**

Question ID	OOL 45	
Question	Question Type	Legislative Requirement
Has the Certificate of Requirement been registered on Title?	Legislative	EPA   27   (1)
<b>Observation/Corrective Action(s)</b>		
No Appendix H of the 2020 annual report documents there is a registration on title of a lease which appears to be for buffer lands. Documentation confirming the actual landfill site is registered on title could not be located in the Ministry's file. The Township should ensure that the landfill Site is registered on title. The Township should provide confirmation in writing that the Site is registered on title, including a copy of the Certificate of Prohibition by December 31, 2021. If the actual site is not registered on title, then this will need to be done.		

### INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

**Ministry Program: Regulated Activity: WASTE : Landfills**

<b>Question ID</b>	OOL 1		
<b>Question</b>		<b>Question Type</b>	<b>Legislative Requirement</b>
Does the Open landfill site have an Environmental Compliance Approval (ECA)?		Legislative	EPA   27   (1)
<b>Observation</b>	<p>Yes Certificate of Approval A272801 dated October 1, 1980 and amended in 1993 for submission of annual report. The ECA was also amended 1996 requiring groundwater and surface water monitoring.</p>		

<b>Question ID</b>	OOL 5		
<b>Question</b>		<b>Question Type</b>	<b>Legislative Requirement</b>
Is the landfill required to take and test monitoring well samples to determine the quality of the ground water?		Information	Not Applicable
<b>Observation</b>	<p>Yes</p>		

<b>Question ID</b>	OOL 6		
<b>Question</b>		<b>Question Type</b>	<b>Legislative Requirement</b>
Are monitoring well samples taken and tested to determine the quality of the groundwater?		Legislative	EPA   27   (1), EPA   R.R.O. 1990, Reg. 347   11   (7)
<b>Observation</b>	<p>Yes</p>		

<b>Question ID</b>	OOL 7		
<b>Question</b>		<b>Question Type</b>	<b>Legislative Requirement</b>
Is the ministry satisfied with the groundwater monitoring program at the site?		Legislative	EPA   27   (1), EPA   R.R.O. 1990, Reg. 347   11   (7)
<b>Observation</b>	<p>Yes</p>		

<b>Question ID</b>	OOL 10	
<b>Question</b>	<b>Question Type</b>	<b>Legislative Requirement</b>
Are measures taken to manage leachate to prevent off-site contamination?	Legislative	EPA   27   (1), EPA   R.R.O. 1990, Reg. 347   11   (7)
<b>Observation</b>		
Yes 30 acres of buffer lands to the east allow for leachate attenuation. The agreement to allow these lands to be used for contamination attenuation (99 year lease) was registered on title by instrument # 264927, dated February 28, 1990.		

<b>Question ID</b>	OOL 12	
<b>Question</b>	<b>Question Type</b>	<b>Legislative Requirement</b>
Is the landfill required to manage landfill gas generated at the site?	Information	Not Applicable
<b>Observation</b>		
Yes There are three gas monitoring probes on site		

<b>Question ID</b>	OOL 34	
<b>Question</b>	<b>Question Type</b>	<b>Legislative Requirement</b>
Has an annual operations report been submitted?	Legislative	EPA   27   (1)
<b>Observation</b>		
Yes The 2020 Annual Monitoring report was submitted on July 7, 2021		

<b>Question ID</b>	OOL 35	
<b>Question</b>	<b>Question Type</b>	<b>Legislative Requirement</b>
Is the ministry satisfied with the annual report submitted?	Legislative	EPA   27   (1)
<b>Observation</b>		
Yes		

<b>Question ID</b>	OOL 37	
<b>Question</b>	<b>Question Type</b>	<b>Legislative Requirement</b>
Is there an ECA condition requiring financial assurance?	Information	Not Applicable
<b>Observation</b>		
No		

<b>Question ID</b>	OOL 45	
<b>Question</b>	<b>Question Type</b>	<b>Legislative Requirement</b>
Has the Certificate of Requirement been registered on Title?	Legislative	EPA   27   (1)
<b>Observation</b>		
No Appendix H of the 2020 annual report documents there is a registration on title of a lease which appears to be for buffer lands. Documentation confirming the actual landfill site is registered on title could not be located in the Ministry's file. The Township should ensure that the landfill Site is registered on title. The Township should provide confirmation in writing that the Site is registered on title, including a copy of the Certificate of Prohibition by December 31, 2021. If the actual site is not registered on title, then this will need to be done.		

<b>Question ID</b>	949100	
<b>Question</b>	<b>Question Type</b>	<b>Legislative Requirement</b>
Were the inspection questions sufficient to address other identified non-compliance items?	Legislative	Not Applicable
<b>Observation</b>		
The following instances of non-compliance were also noted during the inspection: The Environmental Compliance Approval should reflect the current status of the site. In this case the site is temporarily closed. The ECA does not reflect this situation and needs to be amended. It appears this amendment requirement was missed when the site changed operational status a number of years ago.		

**182357 The Registry Act**  
**DECLARATION UNDER**  
**SECTION 23 OF THE ACT**

I...W.F.Hawthorne.....of the Township of Kinloss do solemnly declare that I am a party to Provisional Certificate of Approval Waste Disposal Site (Prov. Cert. No. A 272801) which affects the following lands

All and Singular that certain parcel or tract of land and premises, situate, lying and being in the Township of Kinloss, in the County of Bruce, and being composed of part of Lot 16 in the Sixth Concession of the said Township more particularly described as follows:

BEGINNING at the southeast angle of said Lot 16;

THENCE northerly along the easterly limit of said Lot 16, a distance of 610.5 feet to the point of commencement of the parcel herein conveyed;

THENCE westerly parallel to the southerly limit of said Lot 16, a distance of 709.5 feet;

THENCE northerly parallel to the easterly limit of Lot 16, a distance of 585.75 feet;

THENCE easterly parallel to the southerly limit of said Lot 16, a distance of 709.5 feet more or less to the easterly limit of said Lot 16;

THENCE southerly along the easterly limit of said Lot 16, a distance of 585.75 feet more or less to the point of commencement.

TOGETHER WITH a right-of-way for persons, animals and vehicles in favour of the Grantee, its successors and assigns and their invitees and licencees, over part of lot 16 more particularly described as follows:

BEGINNING at the southeast angle of Lot 16;

THENCE northerly along the easterly limit of Lot 16, a distance of 610.5 feet;

THENCE westerly parallel to the southerly limit of Lot 16, a distance of 528.0 feet to the point of commencement of said right-of-way;

THENCE continuing westerly parallel to the southerly limit of said Lot 16, a distance of 20 feet;

THENCE southerly parallel to the easterly limit of said Lot 16, a distance of 610.5 feet more or less to the southerly limit of Lot 16;

THENCE easterly along the southerly limit of Lot 16, a distance of 20 feet;

THENCE northerly parallel to the easterly limit of Lot 16, a distance of 610.5 feet more or less to the point of commencement of said right-of-way.

I make this solemn declaration conscientiously believing it to be true and knowing that it is of the same force and effect as if made under oath.

Declared before me

at the Village..... of ..Ripley...  
 this ..24th..... day of November..

1980

Marlene Holling  
 A Commissioner etc.

  
 Signature of Clark  
 Township of Kinloss

RECEIVED

MAR 04 2022

TOWNSHIP OF HURON-KINLOSS

Ministry  
of the  
Environment

Provisional Certificate No. A 272801

## PROVISIONAL CERTIFICATE OF APPROVAL WASTE DISPOSAL SITE

Under The Environmental Protection Act, 1971 and the regulations and subject to the limitations thereof, this Provisional Certificate of Approval is issued to:

Township of Kinloss  
Holywood, Ontario  
NOG 2B0

for the use and operation of a 6 hectare (15 acre) landfilling site

all in accordance with the following plans and specifications: 1. Plan of operation submitted to the Owen Sound District Office of MOE under cover of a letter dated August 23, 1979.  
2. Site plan entitled "Kinloss Township Waste Disposal Site."

Located: Part Lot 16, Concession 6  
Township of Kinloss  
County of Bruce

which includes the use of the site only for the disposal of the following categories of waste (NOTE: Use of the site for additional categories of wastes requires a new application and amendments to the Provisional Certificate of Approval). Domestic, commercial and 10% non-hazardous solid industrial (limited to miscellaneous debris from agriculture such as wire, stamps and scrap metal) wastes.

and subject to the following conditions:

1. No operation shall be carried out at the site after sixty days from this condition becoming enforceable unless this Certificate including the reasons for this condition has been registered by the applicant as an instrument in the appropriate Land Registry Office against title to the site and a duplicate registered copy thereof has been returned by the applicant to the Director.

A handwritten signature in black ink, appearing to read "Sam Farrell".

Dated this 1st day of October, 1980.

Ministry of the  
Environment

## NOTICE

TO: Township of Kinloss  
Holyrood, Ontario  
N0G 2B0

You are hereby notified that Provisional Certificate of Approval No. A 272801 has been issued to you subject to the conditions outlined therein.

The reasons for the imposition of these conditions are as follows:

The reason for the condition requiring registration of the Certificate is that Section 46 of The Environmental Protection Act, 1971 prohibits any use being made of the lands after they cease to be used for waste disposal purposes within a period of twenty-five years from the year in which such land ceased to be used unless the approval of the Minister for the proposed use has been given. The purpose of this prohibition is to protect future occupants of the site and the environment from any hazards which might occur as a result of waste being disposed of on the site. This prohibition and potential hazard should be drawn to the attention of future owners and occupants by the Certificate being registered on title.

You may by written notice served upon me and the Environmental Appeal Board within 15 days after receipt of this Notice, require a hearing by the Board.

This Notice should be served upon:

The Secretary,  
Environmental Appeal Board, AND  
1 St. Clair Ave. West,  
5th Floor,  
Toronto, Ontario.

**From:** Hines, Lisa (MECP) <Lisa.Hines@ontario.ca>  
**Sent:** June 12, 2023 1:43 PM  
**To:** Hutchesson, Sarah; John Yungblut  
**Cc:** Jane Eybergen; Tamasauskas, Kaurel  
**Subject:** RE: Submission of Annual Monitoring Reports - Huron and Kinloss Landfill Sites

Good afternoon Sarah,

Surface water reviews of the 2022 Annual Monitoring Reports for the Huron Landfill and Kinloss Landfill have been completed. The following comments were provided by the ministry's technical reviewer:

### Huron Landfill:

Based on my review of 2022 surface water monitoring results for the Huron landfill Site, I have the following comments:

1. Surface water quality measured for both river monitoring locations (SW1, SW2) is similar and do not suggest significant impact from landfill activities. Slight exceedances of aluminum and iron at the downstream location do not require any action.
2. Water quality measured for the ponded water (SW3) showed exceedances of several parameters, indicative of leachate impacts. It is recommended to continue monitoring SW3 location and track changes in contamination level in future monitoring efforts.
3. Surface water monitoring program and its reporting to MECP should continue as per the existing ECA requirements.

### Kinloss Landfill:

Based on my review of the 2020-2022 surface water monitoring data for the Kinloss Landfill Site, I have the following comments:

1. During 2020-2022 monitoring events, certain measurements of aluminum, zinc and TP in surface water samples exceeded their PWQOs. Since these concentrations are not at alarming levels, no action required at this time.
2. In general, water quality measured at both, upstream and downstream, surface water monitoring locations is similar and hence suggest that the landfill Site does not have significant impact on the Creek's water quality.
3. It is agreed that surface water monitoring should continue as per the requirements of the current ECA.

**Subject:** Submission of Annual Monitoring Reports - Huron and Kinloss Landfill Sites

**CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.**

Hi Lisa,

We are submitting two (2) 2022 Landfill Annual Monitoring Reports (AMR) on behalf of the Township of Huron-Kinloss today.

We are submitting the reports electronically, consistent with requests from the MECP. My next email will have the link to the folder titled 'Submitted March 2023 HK', where you will be able to access the final version of the 2022 AMRs being submitted today, March 30<sup>th</sup>, 2023, on behalf of the Township of Huron-Kinloss:

1. 2022 AMR – Huron Landfill, due to the MECP by March 31<sup>st</sup>, 2023 as per ECA No. A272601
2. 2022 AMR – Kinloss Landfill , due to the MECP by March 31<sup>st</sup>, 2023 as per ECA No. A272801

I have included John Yungblut and Jane Eybergen from the Township of Huron-Kinloss on this and the submission email.

Please let me know if I can forward the link to the 2022 Huron-Kinloss Landfill AMR folder to anyone else at the MECP.

Please let me know that you have received this email, as well as that you can access the 2022 AMRs being submitted today.

Sincerely,

Sarah

N/A = Not Applicable

ND = Not detected

TDL = Typical Detection Limit. Actual detection limit varies with the concentration of each sample.

Spring metals samples were erroneously filtered by Maxxam Analytics and thus only the 'dissolved' concentration of each trace metal is reported. The total concentration of trace metals would have been somewhat higher and therefore could have exceeded the PWQO, however this information is not known.

NOTES:

1. PWQO indicates Provincial Water Quality Objectives.
2. (I) indicates interim PWQO
3. Cadmium Interim PWQO = 0.5 µg/L (for Hardness >100 mg/L as CaCO3)
4. Copper Interim PWQO = 5 µg/L (for Hardness >20 mg/L)
5. Revised Interim PWQO = 5 µg/L (for Alkalinity > 80 mg/L (as CaCO3))
6. Zinc Revised Interim PWQO = 20 µg/L

7. Alkalinity should not be decreased by more than 25 % of the natural concentration.

8. Interim PWQO = 75 µg/L for pH >6.5 to 9.0.

9. PWQO = 0.020 mg/L to avoid nuisance algae growth, PWQO = 0.010 mg/L for high level of protection

PWQO = 0.030 mg/L for prevention of excessive plant growth

10. PWQO for un-ionized ammonia

11. Shaded values indicates exceedance of PWQO.

12. ND = Not detected

13. NA = Not analyzed

14. RDL = Reportable Detection Limit

7. Alkalinity should not be decreased by more than 25 % of the natural concentration.

8. Interim PWQO = 75 µg/L for pH >6.5 to 9.0.

9. PWQO = 0.020 mg/L to avoid nuisance algae growth, PWQO = 0.010 mg/L for high level of protection

PWQO = 0.030 mg/L for prevention of excessive plant growth

10. PWQO for un-ionized ammonia

11. Shaded values indicates exceedance of PWQO.

12. ND = Not detected

13. NA = Not analyzed

14. RDL = Reportable Detection Limit

Form 198 - Farm Lease - Revised 1976  
Norman and Gilbert, Limited, Toronto

(FAX) 5193954107

P.003/010

# This Indenture

made (in duplicate) the 30th day of November  
in the year one thousand nine hundred and eighty-nine  
In pursuance of the Sport Farms of Ontario Act

Between

DONALD JOHNSTON  
and HARRY JOHNSTON

and

hereinafter called the LESSOR of the FIRST PART

THE CORPORATION OF THE TOWNSHIP OF KINLOSS

hereinafter called the LESSEE of the SECOND PART

Witnesseth that in consideration of the Rents, Covenants and Agreements hereinafter  
respectively reserved and contained on the part of the Lessee, to be respectively paid,  
observed and performed, the Lessor hath demised and Leased and by these presents DOTH  
demise and LEASE unto the Lessee ALL THAT parcel or tract of land and premises  
situate, lying and being in the Township of Kinloss  
in the County of Bruce  
containing by admeasurement

being composed of 30.30 acres, be the same more or less, and  
Part of Lot 17, Concession 6, in the  
Township of Kinloss, in the County of Bruce and more  
particularly described as Part 3 on Reference Plan  
3R-4858.

Farm Lease, p. 8 - 196 - revised 1978

TO HAVE AND TO HOLD the said demised premises for and during the term of 99  
 -----NINETY-NINE----- years  
 to be computed from the 1st day of January one thousand nine hundred and ninety and thenceforth next ensuing, and  
 fully to be complete and ended, on the 30th day of December 2089..

~~YIELDING AND PAYING therefor yearly and every year during the said term hereby granted unto the Lessor the sum of TWENTY THOUSAND-----~~  
~~(\$20,000.00)----- Dollars, of lawful money of Canada, without any deduction, defalcation or abatement whatsoever to be payable~~

The sum of \$20,000.00 to be paid to the lessor on the final signing of this agreement by all parties.

THE first of such payments to become due and be made on the --- day of ---

THE Lessee COVENANTS with the Lessor to pay rent.  
 AND to pay taxes, except for local improvements.  
 AND to repair reasonable wear and tear and damage by fire, lightning and tempest only excepted.  
 AND to keep up fences.  
 AND to perform all statute labour.  
 AND not to cut down timber or trees of any kind whatsoever, except

AND that the Lessor may enter and view state of repair.  
 AND that the Lessee will repair according to notice in writing, reasonable wear and tear, and damage by fire, lightning and tempest only excepted.  
 AND will not assign or sub-let without leave; and such consent may, notwithstanding any section of the Landlord and Tenant Act of the Province of Ontario, be arbitrarily refused by the Lessor in his sole and uncontrolled discretion.  
 AND will not carry on any business that shall be deemed a nuisance on said premises.  
 AND that he will leave the premises in good repair (reasonable wear and tear and damage by fire, lightning and tempest only excepted).

PROVIDED that the lessee may remove his fixtures, if such removal may be and is done without injury to the said premises.  
 PROVIDED that in the event of damage by fire, lightning or tempest, rent shall cease until the premises are rebuilt.

THE SAID LESSEE hereby covenants and agrees with the said Lessor, that in consideration of the premises, and of the leasing and letting by the said Lessor to the said Lessee of the lands and premises above named for the term hereby created (and it is upon that express understanding that these presents are entered into), that notwithstanding anything contained in Section 30 of Chapter two hundred and thirty six of the Revised Statutes of Ontario, 1970, or in any other section of the said Act, or any other Statute which may hereafter be passed to take the place of the said Act or to amend the same, that none of the goods or chattals of the said Lessee at any time during the continuance of the term hereby created, on said demised premises, shall be exempt from levy by distress for rent in arrear by said Lessee as provided for by section or sections of the said Act above named, or any amendment or amendments thereto, and that upon any claim being made for such exemption by said Lessee or on distress being made by the said Lessor this covenant and agreement may be pleaded as an estoppel against the said Lessee in any action brought to test the right to the levying upon any such goods as are named as exempted in said Section or Sections, or amendment or amendments, thereto. Said Lessee waiving, as he hereby does all and every benefit that could or might have accrued to him under and by virtue of the said Section or Sections of said Act, or any amendment or amendments thereto but for the above Covenant.

AND the Lessee doth hereby further covenant and agree with the Lessor in manner following, that is to say: THAT the Lessee will during the said term, cultivate, till, manure and employ such parts of the said premises as are now or shall hereafter be brought under cultivation in a good farmer-like and proper manner, and will in like manner crop the same in a regular rotation of crops so as not to impoverish, depreciate or injure the soil, and will plough the lands in each year during the said term, and at the end of the said term will leave the said land so manured as aforesaid. AND will during the continuance of said term mow the grass along the fences and in the fence corners on the said lands, keep down all noxious weeds and grasses, which shall grow upon the said premises or on the side of the roads or highways adjacent thereto, and will not sow or permit to be sown any grain infected by smut or containing any foul seeds or noxious weeds, and will not suffer or permit any such foul seeds or noxious weeds to go to seed on the said premises.

AND that if at any time during the said term the Lessee shall neglect to pull up or otherwise destroy or prevent from going to seed on the said lands any noxious weeds or grasses growing thereon, and which are reasonably within the power and duty of the Lessee to do,

Farm Lease, p. 3 - 197 - revised 1978

~~pull-up or otherwise destroy, or prevent from going to seed; the lessor may, by written notice, require the lessee within 48 hours after the service of such notice, to pull up or otherwise destroy or prevent them from going to seed, and on default of the lessee so doing, the lessor may enter upon the said lands with labourers and workmen and do the work by the said notice required to be done by the lessee, and all costs, charges and expenses of or incidental thereto shall be added to the rents hereby reserved, and shall be recoverable in like manner as rent reserved, but this provision shall not in any way impair or abridge the right of re-entry by the lessor on non-performance of covenants.~~  
~~This clause shall not supersede the provisions contained in The Weed Control Act R.S.O. 1970, Chapter 192 as amended from time to time.~~

AND will keep the mouths of all underdrains on the said premises open and free from obstruction, and in good running order at all times during the said term, and will not suffer or permit such drains, or the water-courses in any open ditches on said premises to become obstructed, but will constantly keep the same free and clear, for the escape of the water flowing therein.

AND will carefully protect and preserve all orchard, fruit and shade and ornamental trees on said premises from waste, injury or destruction, and will carefully prune and care for all such trees as often as they require it, and will not suffer or permit any horse, cattle or sheep to have access to the orchard on said premises. And will not allow the manure to be placed or lie against the said buildings on said premises. And will allow any incoming tenant or purchaser to plow the said lands after harvest in the last year of said term, and to have standing for one team or shelter for one tractor and bedroom for one man, and reasonable privilege and rights as may be de-said-plowing.

PROVIDED also, and it is hereby expressly agreed and understood by the parties hereto that if the term hereby granted or any of the goods or chattels of the lessee shall be at any time during said term seized or taken in execution, or attachment by any creditor of the lessee or if the lessee shall make any Chattel Mortgage or Bill of Sale of any of his crops or other goods and chattels, or any assignment for the benefit of creditors, or becoming bankrupt and insolvent, shall take the benefit of any Act, that may be in force for bankrupt and insolvent debtors, or shall attempt to abandon said premises, to sell and dispose of his farm stock and implements, so that there would not in the event of such sale or disposal be a sufficient distress on said premises for the then accruing rent, of which the lessor shall be sole judge, then in every such case, the then current and next ensuing year's rent and the taxes for the then current year (to be reckoned upon the rate of the previous year, in case rate shall not have been fixed for current year) shall immediately become due and payable and the term hereby granted shall at the option of the lessor immediately become forfeited, void and determined, and in every of the above cases such taxes or accrued portion thereof may be recoverable by the lessor in the same manner as the rent hereby reserved.

PROVIDED also that, in case of removal by the lessee of his goods and chattels in whole or substantial part from off the said premises, the lessor may distrain for the rents hereby reserved upon the goods and chattels of the lessee upon any other premises to which they may have been removed.

IN case the lessor should desire to sell the said lands and premises during the said term, the said term may be determined at any time upon one (1) month's notice by a notice to such effect, and that the lessee will, at the expiration of the time limited by the said notice, peaceably and quietly give up possession of the said lands and premises to the lessor; provided that upon such earlier determination of the said term, and after the lessee shall have delivered up possession in manner aforesaid, and paid to the lessor the full proportion of rent and taxes up to the date of such earlier determination, the lessee shall be entitled to be compensated for the value of the crops sown and then growing, or of the ploughing done on the said lands in preparing for a crop, the amount of such compensation to be determined by arbitration if the parties cannot agree thereon.

IN the event of any misunderstanding or misinterpretation arising out of the lease, the parties herein agree that the matter shall be then settled forthwith in accordance with the provisions contained in The Arbitrations Act, R.S.O. 1970, as amended from time to time to be bound by any such decisions obtained as a result thereof.

AND it is hereby agreed between the parties hereto that should the lessor remain in possession of the said lands and premises after the termination of the term hereby granted, without other special agreement, it shall be as a monthly tenant only at a rental of \$ ~~100~~ per month payable in advance on the 1st day of every month and subject in all other respects of the terms of this lease.

ANY notice or other communication required or permitted to be given hereunder shall be in writing and shall be given either by delivering the same to the recipient or mailing the same postage prepaid in a government post box to the recipient at the following address:

If to the Lessor:

If to the Lessee:

Form T - Land Transfer Tax Act  
Affidavit of Residence and Value of the Consideration  
Refer to all instructions on reverse side

**IN THE MATTER OF THE CONVEYANCE OF** ~~Land being described as lot 17, Concession 6, Township of Kinloss, County of Bruce~~ **Part of Lot 17, Concession 6, Township of Kinloss, County of Bruce being described as Part 1 on Reference Plan LR-181**

**BY** ~~Grantor~~ **Donald Johnston & Barry Johnston**

**TO** ~~Grantee~~ **The Corporation of the Township of Kinloss**

**1. Date instrument signed by** ~~Grantor~~ **George C. Magwood**

**MAKE OATH AND SAY THAT:**

- 1 I am giving this affidavit under the powers granted me as the grantor of the above-described property and declare the accuracy of the information. See instruction #1  
 (a) A person in trust for whom the land conveyed in the above-described conveyance is being conveyed.  
 (b) A trustee named in the above-described conveyance to whom the land is being conveyed.  
 (c) A transferee named in the above-described conveyance.  
 (d) The authorized agent or solicitor acting in this transaction for ~~grantor~~ of property **The Corporation of the Township of Kinloss**  
 (e) The President, Vice President, Manager, Secretary, Director, or Treasurer authorized to act for ~~grantor~~ of property \_\_\_\_\_ described in paragraph(s) (a), (b), (c) above, with reference to instrument(s) \_\_\_\_\_  
 (f) A transferee described in paragraph(s) \_\_\_\_\_ described in paragraph(s) (a), (b), (c) above, with reference to instrument(s) \_\_\_\_\_  
 I swear by my word and honour to keep this affidavit on my own behalf and on behalf of ~~my spouse~~ \_\_\_\_\_  
 In paragraph(s) \_\_\_\_\_ I swear only one of paragraphs (a), (b) or (c) above, as applicable, and am making this affidavit on my own behalf and on behalf of ~~my spouse~~ \_\_\_\_\_ who is my spouse describes  
 2 I have completed under the value of the consideration for the conveyance described, I have read and considered the definition of "single family residence" set out in clause 1(1)(j) of the Act. The land conveyed in the above-described conveyance contains at least one and not more than two single family residences.  
 contains less than one and not more than two single family residences.  
 does not contain a single family residence.  
 contains more than two single family residences. See instruction #2  
 Note: Clause 2(1)(d) imposes an additional tax of the rate of one-half of one per cent upon the value of consideration in excess of \$250,000 where the conveyance contains at least one and not more than two single family residences.  
 3 I have read and considered the definitions of "non-resident corporation" and "non-resident person" set out respectively in clauses 1(1)(i) and (j) of the Act and each of the following persons is known to be trustee for whom the land is being conveyed in the above-described conveyance is a "non-resident corporation" or a "non-resident person" as set out in the Act. See instructions 4 and 5

**4. THE TOTAL CONSIDERATION FOR THIS TRANSACTION IS ALLOCATED AS FOLLOWS:**

		None
(a) Money paid or to be paid in cash		\$ 20,000.00
(b) Mortgages, (b) Assumed loans principal and interest to be credited against purchase price		\$ nil
(c) Property transferred in exchange for other property		\$ nil
(d) Securities transferred to the value of <del>actual value</del>		\$ nil
(e) Liens, legalities, restrictions and maintenance charges to which transfer is subject		\$ nil
(f) Other valuable considerations subject to land transfer tax <del>actual value</del>		\$ nil
<b>(g) VALUE OF LAND, BUILDING, FIXTURES AND GOODWILL SUBJECT TO LAND TRANSFER TAX (Total of (a) to (f))</b>		<b>\$ 20,000.00</b>
<b>(h) IN VALUE OF ALL CHATTELS - Items of tangible personal property</b>		<b>\$ 20,000.00</b>
<i>(Note: If it appears on the value of chattels under clause 1(d) the provisions of the "Final Rule No. 4", R.R.O. 1990, c. F46, as amended)</i>		
<b>(i) OTHER CONSIDERATION FOR TRANSACTION NOT INCLUDED IN (g) OR (h) ABOVE</b>		<b>nil</b>
<b>(j) TOTAL CONSIDERATION</b>		<b>\$ 20,000.00</b>

5. If consideration is nominal, describe relationships between transferor and transferee and state purpose of conveyance. See instruction #6
- n/a
6. If the consideration is nominal, is the land subject to any encumbrance?
- n/a
7. Other remarks and explanations, if necessary.

Farm Lease, p. 4 - 198 - revised 1978

ANY notice or other communication mailed or delivered as aforesaid shall be deemed to have been given at the date it was personally delivered or if mailed shall be deemed to have been given on the third business day following the date of which it was mailed. Either the Lessor or the Lessee may change his address for service from time to time by giving notice in accordance with the foregoing.

**PROVISO** for re-entry by the Lessor on non-payment of rent, or non-performance of Covenants.

THE Lessor COVENANTS with the Lessee for quiet enjoyment. The parties further covenant that the terms contained in Schedule A attached hereto shall form part of this lease and be binding on the parties.

IT is hereby declared and agreed that this Indenture shall enure to the benefit of and be binding upon the parties hereto, their heirs, executors, administrators and assigns.

AND it is further agreed that wherever the singular and masculine are used in this Indenture they shall be construed as if the plural or the neuter or feminine had been used, where the context or the party or parties hereto so require, and the rest of the sentence shall be construed as if the grammatical and terminological changes thereby rendered necessary had been made.

IN WITNESS WHEREOF the said parties hereto have hereunto set their hands and seal.

Signed, Sealed and Delivered

\* Witness affidavit made by attorney, notarized: "When I executed the attached instrument as attorney for [name], he/she was of majority, and if unmarried, name of spouse, and where he/she received the power of attorney, he/she was of majority."

SCHEDULE A

To the lease dated November 30, 1989 between the Corporation of the Township of Kinloss as Lessee and Donald and Barry Johnston as Lessors.

1. It is acknowledged by the parties that the demised premises described in this lease will be used by the Lessee as a buffer zone for the purpose of protecting the existing Kinloss Township waste disposal site located on Part Lot 16, Concession 6, Kinloss Township, Bruce County.
2. It is acknowledged that the right to use the land by the Lessee shall include the full right of access at any time by the lessee, its employees, servants and agents, and necessary equipment for the purpose of making inspections and for the purpose of monitoring surface and ground water upon and under the buffer lands, and the lessee agrees to restore, as nearly as may be possible the lands to the extent that they may be altered or disturbed by the exercise of the rights granted in this lease.
3. The Lessor as owners shall have the continued use of the land and access thereto for recreational purposes and shall specifically retain the right to cut timber on the land and to sell any such timber and retain the proceeds therefrom. Provided the Lessors shall not erect any buildings or drill any wells on the said land.
4. It is acknowledged that there is a small spring-fed pond in the southerly portion of the leased land and it is acknowledged that the Lessee will include the pond in the water monitoring program which is required by the Ministry of the Environment as a result of the operation of the adjoining waste disposal site.
5. The Lessor shall be responsible for any real property taxes assessed against the said leased lands and shall pay the taxes so assessed to the Township of Kinloss as they fall due.
6. (a) The Lessee shall indemnify and save harmless the Lessor from all liability whatsoever which may be directly or indirectly attributed to the use of the land by the Lessor as a buffer to its waste disposal site.  
 (b) It is acknowledged by the Lessor that the water within the ground may migrate from the adjoining land fill site owned by the Lessee under the surface of the buffer lands, or that surface water may flow across the lands and that such water may not be suitable as drinking water or for other uses and the Lessors agree not to hold the Lessee liable or in any way responsible for a diminution of water quality on the buffer lands.
7. It is acknowledged and agreed by both parties that no further ponds or wells of any type, or the alteration of any existing streams, waterways, or ponds shall be permitted on the said buffer lands, without approval in writing having first been obtained from the Provincial Ministry of the Environment.
8. This agreement and the easements and rights hereby granted are and shall be conditional upon the approval, pursuant to the Environmental Assessment Act and the Environmental Protection Act, of the use of the Township lands for an enlargement and extension of the Township's waste disposal site.

Cont'd

**APPENDIX I**

## **Monitoring and Screening Checklist**

## **Appendix D-Monitoring and Screening Checklist**

### **General Information and Instructions**

**General Information: The checklist is to be completed, and submitted with the Monitoring Report.**

**Instructions:** A complete checklist consists of:

- (a) a completed and signed checklist, including any additional pages of information which can be attached as needed to provide further details where indicated.
- (b) completed contact information for the Competent Environmental Practitioner (CEP)
- (c) self-declaration that CEP(s) meet(s) the qualifications as set out below and in Section 1.2 of the Technical Guidance Document.

#### **Definition of Groundwater CEP:**

For groundwater, the CEP must have expertise in hydrogeology and meet one of the following:

- (a) the person holds a licence, limited licence or temporary licence under the *Professional Engineers Act*; or
- (b) the person holds a certificate of registration under the *Professional Geoscientists Act, 2000* and is a practicing member, temporary, member or limited member of the Association of Professional Geoscientists of Ontario. O. Reg. 66/08, s. 2..

#### **Definition of Surface water CEP:**

A CEP for surface water assessments is a scientist, professional engineer or professional geoscientist as described in (a) and (b) above with demonstrated experience and post-secondary education, either a diploma or degree, in hydrology, aquatic ecology, limnology, aquatic biology, physical geography with specialization in surface water, and/or water resource management.

The type of scientific work that a CEP performs must be consistent with that person's education and experience. If an individual has appropriate training and credentials in both groundwater and surface water and is responsible for both areas of expertise, the CEP may then complete and validate both sections of the checklist.

<b>Monitoring Report and Site Information</b>	
<b>Waste Disposal Site Name</b>	Kinloss Waste Disposal Site
<b>Location (e.g. street address, lot, concession)</b>	Part Lot 16, Concession 6, in the Former Township of Kinloss, Township of Huron-Kinloss, County of Bruce
<b>GPS Location (taken within the property boundary at front gate/front entry)</b>	463575 m E, 4871980 m N
<b>Municipality</b>	Township of Huron-Kinloss
<b>Client and/or Site Owner</b>	Township of Huron-Kinloss
<b>Monitoring Period (Year)</b>	2023
This Monitoring Report is being submitted under the following:	
<b>Certificate of Approval No.:</b>	A272801
<b>Director's Order No.:</b>	
<b>Provincial Officer's Order No.:</b>	
<b>Other:</b>	

<b>Report Submission Frequency</b>	<input checked="" type="radio"/> <b>Annual</b> <input type="radio"/> <b>Other</b>	Specify (Type Here):
<b>The site is:</b>	<input type="radio"/> <b>Active</b> <input checked="" type="radio"/> <b>Inactive</b> <input type="radio"/> <b>Closed</b>	
<b>If closed, specify C of A, control or authorizing document closure date:</b>	N/A	
<b>Has the nature of the operations at the site changed during this monitoring period?</b>	<input type="radio"/> <b>Yes</b> <input checked="" type="radio"/> <b>No</b>	
<b>If yes, provide details:</b>	Type Here	
<b>Have any measurements been taken since the last reporting period that indicate landfill gas volumes have exceeded the MOE limits for subsurface or adjacent buildings? (i.e. exceeded the LEL for methane)</b>	<input type="radio"/> Yes <input checked="" type="radio"/> No	

## Groundwater WDS Verification:

Based on all available information about the site and site knowledge, it is my opinion that:

### Sampling and Monitoring Program Status:

<p>1) The monitoring program continues to effectively characterize site conditions and any groundwater discharges from the site. All monitoring wells are confirmed to be in good condition and are secure:</p>	<input checked="" type="radio"/> Yes <input type="radio"/> No	
<p>2) All groundwater, leachate and WDS gas sampling and monitoring for the monitoring period being reported on was successfully completed as required by Certificate(s) of Approval or other relevant authorizing/control document(s):</p>	<input checked="" type="radio"/> Yes <input type="radio"/> No <input type="radio"/> Not Applicable	If no, list exceptions below or attach information.
Groundwater Sampling Location	Description/Explanation for change (change in name or location, additions, deletions)	

<p><b>3) a) Some or all groundwater, leachate and WDS gas sampling and monitoring requirements have been established or defined outside of a ministry C of A, authorizing, or control document.</b></p>	<p><input type="radio"/> Yes  <input checked="" type="radio"/> No  <input type="radio"/> Not Applicable</p>	
<p><b>b) If yes, the sampling and monitoring identified under 3(a) for the monitoring period being reported on was successfully completed in accordance with established protocols, frequencies, locations, and parameters developed as per the Technical Guidance Document:</b></p>	<p><input type="radio"/> Yes  <input type="radio"/> No  <input checked="" type="radio"/> Not Applicable</p>	<p>If no, list exceptions below or attach additional information.</p>
Groundwater Sampling Location	Description/Explanation for change (change in name or location, additions, deletions)	Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date
<p><b>4) All field work for groundwater investigations was done in accordance with standard operating procedures as established/outlined per the Technical Guidance Document (including internal/external QA/QC requirements) (Note: A SOP can be from a published source, developed internally by the site owner's consultant, or adopted by the consultant from another organization):</b></p>	<p><input checked="" type="radio"/> Yes  <input type="radio"/> No</p>	<p>If no, specify (Type Here):</p>

## Sampling and Monitoring Program Results/WDS Conditions and Assessment:

5) The site has an adequate buffer, Contaminant Attenuation Zone (CAZ) and/or contingency plan in place. Design and operational measures, including the size and configuration of any CAZ, are adequate to prevent potential human health impacts and impairment of the environment.	<input checked="" type="radio"/> Yes <input type="radio"/> No	
6) The site meets compliance and assessment criteria.	<input type="radio"/> Yes <input checked="" type="radio"/> No	RUC exceedances discussed in Section 3.5 of the AMR.
7) The site continues to perform as anticipated. There have been no unusual trends/ changes in measured leachate and groundwater levels or concentrations.	<input checked="" type="radio"/> Yes <input type="radio"/> No	
1) Is one or more of the following risk reduction practices in place at the site: (a) There is minimal reliance on natural attenuation of leachate due to the presence of an effective waste liner and active leachate collection/treatment; or (b) There is a predictive monitoring program in-place (modeled indicator concentrations projected over time for key locations); or (c) The site meets the following two conditions (typically achieved after 15 years or longer of site operation):  i.The site has developed stable leachate mound(s) and stable leachate plume geometry/concentrations; and ii.Seasonal and annual water levels and water quality fluctuations are well understood.	<input checked="" type="radio"/> Yes <input type="radio"/> No	Note which practice(s): <input type="checkbox"/> (a) <input type="checkbox"/> (b) <input checked="" type="checkbox"/> (c)
9) Have trigger values for contingency plans or site remedial actions been exceeded (where they exist):	<input type="radio"/> Yes <input type="radio"/> No <input checked="" type="radio"/> Not Applicable	If yes, list value(s) that are/have been exceeded and follow-up action taken (Type Here):

## **Groundwater CEP Declaration:**

I am a licensed professional Engineer or a registered professional geoscientist in Ontario with expertise in hydrogeology, as defined in Appendix D under Instructions. Where additional expertise was needed to evaluate the site monitoring data, I have relied on individuals who I believe to be experts in the relevant discipline, who have co-signed the compliance monitoring report or monitoring program status report, and who have provided evidence to me of their credentials.

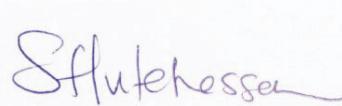

I have examined the applicable Certificate of Approval and any other environmental authorizing or control documents that apply to the site. I have read and followed the Monitoring and Reporting for Waste Disposal Sites Groundwater and Surface Water Technical Guidance Document (MOE, 2010, or as amended), and associated monitoring and sampling guidance documents, as amended from time to time. I have reviewed all of the data collected for the above-referenced site for the monitoring period(s) identified in this checklist. Except as otherwise agreed with the ministry for certain parameters, all of the analytical work has been undertaken by a laboratory which is accredited for the parameters analysed to ISO/IEC 17025:2005 (E)- General requirements for the competence of testing and calibration laboratories, or as amended from time to time by the ministry.

If any exceptions or potential concerns have been noted in the questions in the checklist attached to this declaration, it is my opinion that these exceptions and concerns are minor in nature and will be rectified for the next monitoring/reporting period. Where this is not the case, the circumstances concerning the exception or potential concern and my client's proposed action have been documented in writing to the Ministry of the Environment District Manager in a letter from me dated:

## **Recommendations:**

Based on my technical review of the monitoring results for the waste disposal site:

<p><input checked="" type="radio"/> No changes to the monitoring program are recommended</p> <p><input type="radio"/> The following change(s) to the monitoring program is/are recommended:</p>	
<p><input checked="" type="radio"/> No Changes to site design and operation are recommended</p> <p><input type="radio"/> The following change(s) to the site design and operation is/ are recommended:</p>	

<b>Name:</b>	Sarah Hutchesson, M.Sc., P.Eng.

## Surface Water WDS Verification:

Provide the name of surface water body/bodies potentially receiving the WDS effluent and the approximate distance to the waterbody (including the nearest surface water body/bodies to the site):

Name (s)	Tributary of Kinloss Creek
Distance(s)	235 m east of landfill

Based on all available information and site knowledge, it is my opinion that:

### Sampling and Monitoring Program Status:

1) The current surface water monitoring program continues to effectively characterize the surface water conditions, and includes data that relates upstream/background and downstream receiving water conditions:	<input checked="" type="radio"/> Yes	
	<input type="radio"/> No	
2) All surface water sampling for the monitoring period being reported was successfully completed in accordance with the Certificate(s) of Approval or relevant authorizing/control document(s) (if applicable):	<input checked="" type="radio"/> Yes  <input type="radio"/> No  Not applicable (No C of A, <input type="radio"/> authorizing / control document applies)	If no, specify below or provide details in an attachment.

Surface Water Sampling Location	Description/Explanation for change (change in name or location, additions, deletions)	Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date
Type Here	Type Here	Select Date

<p><b>3) a) Some or all surface water sampling and monitoring program requirements for the monitoring period have been established outside of a ministry C of A or authorizing/control document:</b></p>	<p><input type="radio"/> Yes  <input checked="" type="radio"/> No  <input type="radio"/> Not Applicable</p>		
<p><b>b) If yes, all surface water sampling and monitoring identified under 3 (a) was successfully completed in accordance with the established program from the site, including sampling protocols, frequencies, locations and parameters) as developed per the Technical Guidance Document:</b></p>	<p><input type="radio"/> Yes  <input type="radio"/> No  <input checked="" type="radio"/> Not Applicable</p>	<p>If no, specify below or provide details in an attachment.</p>	
Surface Water Sampling Location	Description/Explanation for change (change in name or location, additions, deletions)		Date
Type Here	Type Here		Select Date
Type Here	Type Here		Select Date
Type Here	Type Here		Select Date
Type Here	Type Here		Select Date
<p><b>4) All field work for surface water investigations was done in accordance with standard operating procedures, including internal/external QA/QC requirements, as established/outlined as per the Technical Guidance Document, MOE 2010, or as amended. (Note: A SOP can be from a published source, developed internally by the site owner's consultant, or adopted by the consultant from another organization):</b></p>	<p><input checked="" type="radio"/> Yes  <input type="radio"/> No</p>	<p>If no, specify (Type Here):</p>	

## Sampling and Monitoring Program Results/WDS Conditions and Assessment:

<p><b>5) The receiving water body meets surface water-related compliance criteria and assessment criteria: i.e., there are no exceedances of criteria, based on MOE legislation, regulations, Water Management Policies, Guidelines and Provincial Water Quality Objectives and other assessment criteria (e.g., CWQGs, APVs), as noted in Table A or Table B in the Technical Guidance Document (Section 4.6):</b></p>		
<p>If no, list parameters that exceed criteria outlined above and the amount/percentage of the exceedance as per the table below or provide details in an attachment:</p>		
Parameter	Compliance or Assessment Criteria or Background	Amount by which Compliance or Assessment Criteria or Background Exceeded
e.g. Nickel	e.g. C of A limit, PWQO, background	e.g. X% above PWQO
As outlined in Section 3.4 of report	As outlined in Section 3.4 of report	As outlined in Section 3.4 of report
<p><b>6) In my opinion, any exceedances listed in Question 5 are the result of non-WDS related influences (such as background, road salting, sampling site conditions)?</b></p>	<input checked="" type="radio"/> Yes <input type="radio"/> No	<p>As outlined in Section 3.4 of report, the pattern indicates that the landfill site does not have a measurable effect on the water quality of the creek.</p>

<p><b>7) All monitoring program surface water parameter concentrations fall within a stable or decreasing trend. The site is not characterized by historical ranges of concentrations above assessment and compliance criteria.</b></p>	<input checked="" type="radio"/> Yes <input type="radio"/> No	<p>If no, list parameters and stations that are outside the expected range. Identify whether parameter concentrations show an increasing trend or are within a high historical range (Type Here)</p>
<p><b>8) For the monitoring program parameters, does the water quality in the groundwater zones adjacent to surface water receivers exceed assessment or compliance criteria (e.g., PWQOs, CWQGs, or toxicity values for aquatic biota (APVs)):</b></p>	<input type="radio"/> Yes <input checked="" type="radio"/> No <input type="radio"/> Not Known <input type="radio"/> Not Applicable	<p>If yes, provide details and whether remedial measures are necessary (Type Here)</p>

## Surface Water CEP Declaration:

I, the undersigned hereby declare that I am a Competent Environmental Practitioner as defined in Appendix D under Instructions, holding the necessary level of experience and education to design surface water monitoring and sampling programs, conduct appropriate surface water investigations and interpret the related data as it pertains to the site for this monitoring period.

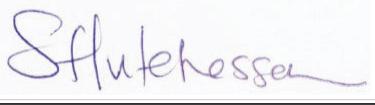

I have examined the applicable Certificate of Approval and any other environmental authorizing or control documents that apply to the site. I have read and followed the Monitoring and Reporting for Waste Disposal Sites Groundwater and Surface Water Technical Guidance Document (MOE, 2010, or as amended) and associated monitoring and sampling guidance documents, as amended from time to time. I have reviewed all of the data collected for the above-referenced site for the monitoring period(s) identified in this checklist. Except as otherwise agreed with the ministry for certain parameters, all of the analytical work has been undertaken by a laboratory which is accredited for the parameters analysed to ISO/IEC 17025:2005 (E)- General requirements for the competence of testing and calibration laboratories, or as amended from time to time by the ministry.

If any exceptions or potential concerns have been noted in the questions in the checklist attached to this declaration, it is my opinion that these exceptions and concerns are minor in nature or will be rectified for future monitoring events. Where this is not the case, the circumstances concerning the exception or potential concern and my client's proposed action have been documented in writing to the Ministry of the Environment District Manager in a letter from me dated:

## Recommendations:

Based on my technical review of the monitoring results for the waste disposal site:

<input checked="" type="radio"/> No Changes to the monitoring program are recommended	Type Here
<input type="radio"/> The following change(s) to the monitoring program is/are recommended:	
<input checked="" type="radio"/> No changes to the site design and operation are recommended	Type Here
<input type="radio"/> The following change(s) to the site design and operation is/are recommended:
